

County of Forsyth

OFFICE OF ENVIRONMENTAL ASSISTANCE AND PROTECTION

FORSYTH COUNTY GOVERNMENT CENTER
201 NORTH CHESTNUT STREET
WINSTON-SALEM, NC 27101-4120

PERMIT TO CONSTRUCT/OPERATE
AIR QUALITY CONTROL
CLASS: Title V (TV)

PERMIT NUMBER	EFFECTIVE DATE	EXPIRATION DATE	RENEWAL DUE
00732-TV-12	May 22, 2015	September 13, 2018	December 17, 2017

Facility Name: Ingedion Incorporated, Winston-Salem Plant
Mailing Address: P.O. Box 12939
City, State, ZIP Code: Winston-Salem, NC 27117-2939

Facility Location: 4501 Overdale Road
City: Winston-Salem

In accordance with the provisions set forth in the Forsyth County Air Quality Technical Code and Chapter 3 of the Forsyth County Code, "Air Quality Control", the facility identified above is authorized to operate, as outlined in Part I, "Air Quality Title V Operation Permit", the emission source(s) and associated air pollution control device(s) specified herein, in accordance with the terms, conditions, and limitations contained within this permit.

The permittee shall not construct, operate, or modify any emission source(s) or air pollution control device(s) without having first submitted a complete air quality permit application to the Forsyth County Office of Environmental Assistance and Protection and received an Air Quality Permit, except as provided in this permit or in accordance with applicable provisions of the Forsyth County Air Quality Technical Code.

This permit supersedes all previous permits issued to the permittee by the Forsyth County Office of Environmental Assistance and Protection.

Peter B. Lloyd, Ph.D., P.E., Manager
Compliance Assistance & Permitting Division

5/22/2015

DATE:

Ingredion Incorporated, Winston-Salem Plant
Air Quality Permit # 00732-TV-12

SECTION 2 FACILITY GENERAL ADMINISTRATIVE CONDITIONS

- 2.1 **General Provisions** [Subchapter 3A and Rule 3Q .0508(i)(16)]
- A. Terms not otherwise defined in this permit shall have the meaning assigned to such terms as defined in Subchapters 3D and 3Q of the Forsyth County Air Quality Technical Code (FCAQTC).
 - B. The terms, conditions, requirements, limitations and restrictions set forth in this permit are binding and enforceable pursuant to Subchapter 3A of the Forsyth County Air Quality Ordinance (FCAQO), including assessment of civil and/or criminal penalties. This permit is valid only for the specific processes and operations applied for and indicated in the air quality permit application. Any unauthorized deviation from the conditions of this permit may constitute grounds for revocation and enforcement action by this Office.
 - C. This permit is not a waiver of or approval of any other permits that may be required for other aspects of the facility which are not addressed in this permit.
 - D. This permit does not relieve the permittee from liability for harm or injury to human health or welfare, animal or plant life, or property caused by the construction or operation of this permitted facility, or from penalties therefore. This permit does not allow the permittee to cause pollution in contravention of local laws or rules, unless specifically authorized by an order from the Director, or to cause pollution in contravention of state laws or rules.
 - E. Terms and conditions contained herein shall be enforceable by this Office, the U.S. EPA and citizens of the United States as defined in the federal Clean Air Act, except those identified as **Locally Enforceable Only** requirements which are enforceable by this Office.

- F. Any stationary installation which will reasonably be expected to be a source of pollution shall not be operated, maintained or modified without the appropriate and valid permits issued by this Office, unless the source is exempted by rule. This Office may issue a permit only after it receives reasonable assurance that the installation will not cause pollution in violation of any of the applicable requirements.
- G. In addition to the authority found in Rules 3D. 0501 and 3Q .0508(i)(16), any deviation from the monitoring provisions of this permit may result in a request by this Office to submit data on rates of emissions in order to demonstrate compliance with any applicable regulation.

2.2 Permit Availability [Rules 3Q .0507(k), .0508(i)(16), .0508(i)(9) and .0110]

The permittee shall have available at the facility a copy of this permit and shall retain for the duration of the permit term one complete copy of the application and any information submitted in support of the application package. The permit and application shall be made available to an authorized representative of this Office or the U.S. EPA upon request.

2.3 Submissions [Rules 3Q .0507(c), .0508(i)(16) and .0104]

All documents, reports, test data, monitoring data, notifications, request for renewal, and any other information required to be sent to this Office by this permit shall be submitted to the Forsyth County Office of Environmental Assistance and Protection, 201 N. Chestnut Street, Winston-Salem, NC 27101-4120.

2.4 Severability Clause [Rule 3Q .0508(i)(2)]

The provisions of this permit are severable. If any provision of this permit, or the application of any provision of this permit to any specific circumstance, is challenged, the application of the provision in question to other circumstances, as well as the remainder of this permit's provisions, shall not be affected.

2.5 Duty to Comply [Rule 3Q .0508(i)(3)]

The permittee shall comply with all terms, conditions, requirements, limitations and restrictions set forth in this permit. Noncompliance with any permit condition is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application.

2.6 Need to Halt or Reduce Activity Not a Defense [Rule 3Q .0508(i)(4)]

It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

2.7 Permit Shield [Rule 3Q .0512(a)]

- A. Compliance with the terms and conditions of this permit shall be deemed compliance with applicable requirements, where such applicable requirements are included and specifically identified in the permit as of the date of permit issuance.
- B. A permit shield shall not alter or affect:
1. the power of the Forsyth County Board of Commissioners, Director, or Governor under NCGS 143-215.3(a)(12) or the U.S. EPA under Section 303 of the federal Clean Air Act;
 2. the liability of an owner or operator of a facility for any violation of applicable requirements prior to the effective date of the permit or at the time of permit issuance;
 3. the applicable requirements under Title IV of the Clean Air Act; or
 4. the ability of the Director or the U.S. EPA under Section 114 of the federal Clean Air Act to obtain information to determine compliance of the facility with its permit.
- C. A permit shield shall not apply to any change made at a facility that does not require a permit or to any permit revision made under Rule 3Q .0523.
- D. A permit shield shall not extend to minor permit modifications made under Rule 3Q .0515.

2.8 Circumvention [Rules 3D .0502 and 3Q .0508(i)(16)]

No person shall circumvent any permitted air pollution control device, or allow the emissions of regulated air pollutants without the applicable air pollution control device operating properly. Unless otherwise specified by this permit, no permitted emission source may be operated without the concurrent operation of its associated air pollution control device(s) and appurtenances.

2.9 Good Air Pollution Control Practice [Rules 3D .0502 and 3Q .0508(i)(16)]

At all times, the equipment listed in *Section 1* shall be operated and maintained in a manner consistent with the design and emissions control as applied for in the application.

2.10 Reporting Requirements for Excess Emissions and Permit Deviations [Rules 3D .0535(f) and 3Q .0508(f)(2), 3Q .0508(i)(16) and 3Q .0508(g)]

"Excess Emissions" - means an emission rate that exceeds any applicable emission limitation or standard allowed by any rule in Sections 3D .0500, .0900, .1200 or .1400; or by a permit condition; or that exceeds a **Locally Enforceable Only** emission limit established in a permit issued under Section 3Q .0700. (*Note: This definition applies where the NSPS does not further define excess emissions for an affected NSPS emissions source.*)

"Deviation" - means any action or condition not in accordance with the terms and

conditions of this permit including those attributable to upset conditions.

A. Sources subject to Rules 3D .0524, .1110 or .1111

Excess Emissions and Permit Deviations

1. If the source specific NSPS (3D .0524) or NESHAP (3D .1110 or .1111) defines "excess emissions", these shall be reported as prescribed in 3D .0524, .1110 or .1111.
2. If the source specific NSPS (3D .0524) or NESHAP (3D .1110 or .1111) does NOT define "excess emissions", the permittee shall report excess emissions as deviations from permit requirements as prescribed in paragraph 3, below.
3. In addition to any specific NSPS or NESHAP reporting requirements the permittee shall upon becoming aware:
 - a. report to this Office any deviations from permit requirements by the next business day, unless an alternative reporting schedule is specifically provided in the permit, and
 - b. report in writing to this Office all deviations from permit requirements or any excess emissions within two business days, unless an alternative reporting schedule is specifically provided in the permit. The written report shall include the probable cause of such deviations and any corrective actions or preventative actions taken. Reports of all deviations from permit requirements shall be certified by a responsible official.

B. Sources NOT subject to Rules 3D .0524, 1110 or .1111

1. Excess Emissions Greater than Four Hours in Duration [3D .0535(f)]

The permittee shall report excess emissions greater than four hours in duration as prescribed in Rule 3D .0535(f) including, but not limited to the following:

- a. Notify this Office of any such occurrence by 9:00 a.m. Eastern time of this Office's next business day of becoming aware of the occurrence as described in Rule 3D .0535(f)(1);
- b. Notify this Office immediately when corrective measures have been accomplished; and
- c. Submit, if requested, to this Office within 15 days after the request, a written report as described in Rule 3D .0535(f)(3).

2. Excess Emissions Less than Four Hours in Duration and Deviations [3Q .0508(f)]

The permittee shall report excess emissions less than four hours in duration and deviations from permit requirements as follows:

- a. Report to this Office any excess emissions less than four hours in duration

and any deviations from permit requirements quarterly, unless an alternative reporting schedule is specifically provided in the permit; and

- b. Report in writing to this Office any excess emission less than four hours in duration or any deviations from permit requirements quarterly, unless an alternative reporting schedule is specifically provided in the permit. The written report shall include the probable cause of such excess emissions and deviations and any corrective actions or preventative actions taken. All reports of excess emissions and deviations from permit requirements shall be certified by a responsible official.

- C. Other Requirements under Rule 3D .0535 (Rule 3D .0535(g) is ***Locally Enforceable Only.***)

The permittee shall comply with all other requirements contained in Rule 3D .0535.

2.11 Emergency Provisions <40 CFR 70.6(g)>

The permittee shall be subject to the following provision with regard to emergencies:

- A. An "emergency" means any situation arising from sudden and reasonably unforeseeable events beyond the control of the facility, including acts of God, which situation requires immediate corrective action to restore normal operation, and that causes the facility to exceed a technology-based emission limitation under the permit due to unavoidable increases in emissions attributable to the emergency. An emergency shall not include noncompliance to the extent caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation, or operator error.
- B. An emergency constitutes an affirmative defense to an action brought for noncompliance with such technology-based emission limitations if the conditions specified in paragraph C below are met.
- C. The affirmative defense of emergency shall be demonstrated through properly signed contemporaneous operating logs, or other relevant evidence that include information as follows:
 1. an emergency occurred and that the permittee can identify the cause(s) of the emergency;
 2. the permitted facility was at the time being properly operated;
 3. during the period of the emergency the permittee took all reasonable steps to minimize levels of emissions that exceeded the standards, or other requirements in the permit; and
 4. the permittee submitted notice of the emergency to this Office within two working days of the time when emission limitations were exceeded due to the emergency. This notice must contain a description of the emergency, and steps taken to mitigate emissions, and corrective actions taken.

- D. In any enforcement proceeding, the permittee seeking to establish the occurrence of an emergency has the burden of proof.
- E. This provision is in addition to any emergency or upset provision contained in any applicable requirement specified elsewhere herein.

2.12 Permit Fees [Rules 3Q .0206(b), .0508(i)(10)) and .0519(a)(4)]

If, within 30 days after being billed, the permittee fails to pay an annual permit fee required under Subchapter 3Q .0200 of the FCAQTC, the Director may initiate action to terminate this permit under Rule 3Q .0519 of the FCAQTC.

2.13 Annual Emission Inventory Requirements [Rule 3Q .0207]

The permittee shall report to the Director by June 30th of each year the actual emissions of each air pollutant listed in Rule 3Q .0207(a) from each emission source within the facility during the previous calendar year. The report shall be in or on such form(s) as may be established by the Director. The accuracy of the report shall be certified by a responsible official of the facility.

2.14 Compliance Certification <40 CFR 70.6(c)> [Rules 3Q .0508(n) and .0508((i)(16))]

By March 1st unless another date is established by the Director, the permittee shall submit to this Office and the U.S. EPA (U.S. EPA Region 4, Air Enforcement Section, Mail Code: 4APT-AEEB, 61 Forsyth Street, S.W., Atlanta, GA 30303) a compliance certification by a responsible official with all terms and conditions in the permit, including emissions limitations, standards, or work practices. The compliance certification shall comply with additional requirements as may be specified under Sections 114(a)(3) or 504(b) of the federal Clean Air Act. The compliance certification shall include all of the following (provided that the identification of applicable information may cross-reference the permit or previous reports as applicable):

- A. the identification of each term or condition of the permit that is the basis of the certification;
- B. the identification of the method(s) or other means used by the permittee for determining the compliance status with each term and condition during the certification period, and whether such methods or other means provide continuous or intermittent data. Such methods and other means shall include at a minimum, the methods and means required under 40 CFR 70.6(a)(3). If necessary, the permittee also shall identify any other material information that must be included in the certification to comply with Section 113(c)(2) of the federal Clean Air Act, which prohibits knowingly making a false certification or omitting material information;
- C. the status of compliance with the terms and conditions of the permit for the period covered by the certification, based on the method or means designated in paragraph B above. The certification shall identify each deviation and take it into account in the

compliance certification. The certification shall also identify as possible exceptions to compliance any periods during which compliance is required and in which an excursion or exceedance as defined under 40 CFR Part 64 occurred; and

- D. such other facts as the permitting authority may require to determine the compliance status of the source.

2.15 Retention of Records [Rule 3Q .0508(f)]

The permittee shall retain records of all required monitoring data and supporting information for a period of at least five years from the date of the monitoring sample, measurement, report, or application. Supporting information includes all calibration and maintenance records and all original strip-chart recordings for continuous monitoring information, and copies of all reports required by the permit.

2.16 NESHAP - Recordkeeping Requirement for Applicability Determinations <40 CFR 63.10(b)(3)> [Rule 3D .1111]

If the permittee determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants is not subject to a relevant standard or other requirement established under 40 CFR Part 63, the permittee shall keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source. This record shall include all of the information required under 40 CFR 63.10(b)(3).

2.17 Duty to Provide Information [Rule 3Q .0508(i)(9)]

- A. The permittee shall furnish to this Office, in a timely manner, any reasonable information that the Director may request in writing to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit.
- B. The permittee shall furnish this Office copies of records required to be kept by the permit when such copies are requested by the Director.

2.18 Duty to Supplement or Correct Application [Rule 3Q .0507(f)]

The permittee, upon becoming aware that any relevant facts were omitted from the application or that incorrect information was submitted with the application, shall promptly submit such supplementary facts or corrected information to this Office. The permittee shall also provide additional information necessary to address any requirements that become applicable to the source after the date a complete application was submitted but prior to release of the draft permit.

2.19 Certification by Responsible Official [Rule 3Q .0520]

A responsible official (as defined in 40 CFR 70.2) shall certify the truth, accuracy, and completeness of any application form, report, or compliance certification required by this permit. All certifications shall state that, based on information and belief formed after reasonable inquiry, the statement and information in the document are true, accurate, and complete.

2.20 Inspection and Entry [Rule 3Q .0508(l)]

- A. Upon presentation of credentials and other documents as may be required by law, the permittee shall allow authorized representatives of this Office to perform the following:
1. enter upon the permittee's premises where the permitted facility is located or emissions-related activity is conducted, or where records are kept under the conditions of the permit;
 2. have access to and copy, at reasonable times, any records that must be kept under conditions of the permit;
 3. inspect, at reasonable times and using reasonable safety practices any source, equipment (including monitoring and air pollution control equipment), practices, or operations regulated or required under the permit; and
 4. sample or monitor substances or parameters, at reasonable times and using reasonable safety practices, for the purpose of assuring compliance with the permit or applicable requirements.

Nothing in this condition shall limit the ability of the U.S. EPA to inspect or enter the premises of the permittee under Section 114 or other provisions of the Clean Air Act.

- B. No person shall obstruct, hamper or interfere with any such authorized representative while in the process of carrying out his official duties.

2.21 Averaging Times <40 CFR 70.6(a)(3)> [Rule 3Q .0508(f)]

Unless otherwise specified in *Section 3* of this permit for a specific emission standard or limitation, the applicable averaging period for determining compliance with an emission standard or limitation during compliance testing shall be based on the applicable U.S. EPA reference test method.

2.22 Compliance Testing [Rule 3D .0501(b)]

When requested by this Office for determining compliance with emission control standards, the permittee shall provide sampling ports, pipes, lines, or appurtenances for the collection of samples and data required by the test procedure; scaffolding and safe access to the sample and data collection locations; and light, electricity, and other utilities required for sample and data.

2.23 General Emissions Testing and Reporting Requirements [Rule 3Q .0508(i)(16)]

Testing shall be conducted in accordance with FCAQTC Section 3D .2600 except as may be otherwise required in FCAQTC Rules 3D .0524, 3D .0912, 3D .1110, 3D .1111, 3D .1415 or a permit condition specific to the emissions source. Requests to use an alternative test method or procedure must be made in writing at least 45 days prior to the test and approved by this Office. Alternatives to test methods or procedures specified for emissions sources subject to test requirements under 40 CFR 60, 40 CFR 61 or 40 CFR 63, may require approval by the U.S. EPA. When required to conduct emissions testing under the terms of the permit:

- A. The permittee shall arrange for air emission testing protocols to be provided to the Director prior to air pollution testing. Testing protocols are not required to be pre-approved prior to air pollution testing. Emission testing protocols must be submitted at least 45 days before conducting the test for pre-approval prior to testing if requested by the permittee.
- B. The permittee shall notify this Office of the specific test dates at least 15 days prior to the scheduled test date in order to afford this Office the opportunity to have an observer on-site during the sampling program.
- C. During all sampling periods, the permittee shall operate the emission source(s) under operating conditions that best fulfills the purpose of the test and are approved by the Director or his delegate.
- D. The permittee shall submit one copy of the test report to this Office not later than 30 days after sample collection. The permittee may request an extension to submit the final test report if the extension request is a result of actions beyond the control of the permittee. The test report shall contain at a minimum the following information:
 1. a certification of the test results by sampling team leader and facility representative;
 2. a summary of emissions results expressed in the same units as the emission limits given in the rule for which compliance is being determined and text detailing the objectives of the testing program, the applicable state and federal regulations, and conclusions about the testing and compliance status of the emission source(s) as appropriate;
 3. a detailed description of the tested emission source(s) and sampling location(s) process flow diagrams, engineering drawings, and sampling location schematics as necessary;
 4. all field, analytical and calibration data necessary to verify that the testing was performed as specified in the applicable test methods;
 5. example calculations for at least one test run using equations in the applicable test methods and all test results including intermediate parameter calculations; and
 6. documentation of facility operating conditions during all testing periods and an

explanation relating these operating conditions to maximum normal operation. If necessary, provide historical process data to verify maximum normal operation.

- E. This Office will review emission test results with respect to the specified testing objectives as proposed by the permittee and approved by this Office.

2.24 Termination, Modification, and Revocation of the Permit [Rule 3Q .0519]

The Director may terminate, modify, or revoke and reissue this permit if:

- A. the information contained in the application or presented in support thereof is determined to be incorrect;
- B. the conditions under which the permit or permit renewal was granted have changed;
- C. violations of conditions contained in the permit have occurred;
- D. the permit holder fails to pay fees required under Section 3Q .0200 within 30 days after being billed;
- E. the permittee refuses to allow the Director or his authorized representative upon presentation of credentials:
 - 1. to enter, at reasonable times and using reasonable safety practices, the permittee's premises in which a source of emissions is located or in which any records are required to be kept under terms and conditions of the permit;
 - 2. to have access, at reasonable times, to any copy or records required to be kept under terms and conditions of the permit;
 - 3. to inspect, at reasonable times and using reasonable safety practices, any source of emissions, control equipment, and any monitoring equipment or method required in the permit; or
 - 4. to sample, at reasonable times and using reasonable safety practices, any emission sources at the facility;
- F. the U.S. EPA requests that the permit be revoked under 40 CFR 70.7(g) or 70.8(d);
or
- G. the Director finds that termination, modification, or revocation and reissuance of the permit is necessary to carry out the purpose of Chapter 3 of the Forsyth County Code.

2.25 Permit Reopenings, Modifications, Revocations and Reissuances, or Terminations [Rule 3Q .0508(i)(5)]

The Director may reopen, modify, revoke and reissue, or terminate this permit for reasons specified in Rule 3Q .0517 or .0519. The filing of a request by the permittee for a permit revision, revocation and reissuance, or termination, notification of planned changes, or anticipated noncompliance does not stay any permit condition in this permit.

2.26 Permit Renewal [Rule 3Q .0508(e) and Rule 3Q .0513]

This permit is issued for a term not to exceed five years. Permits issued under Title IV of the Clean Air Act shall be issued for a fixed period of five years. This permit shall expire at the end of its term. Permit expiration terminates the facility's right to operate unless a complete renewal application is submitted at least nine months before the date of permit expiration. If the permittee or applicant has complied with Rule 3Q .0512(b)(1), this permit shall not expire until the renewal permit has been issued or denied. All terms and conditions of this permit shall remain in effect until the renewal permit has been issued or denied.

2.27 Reopening for Cause [Rules 3Q .0517 and .0508(g)]

This permit shall be reopened and revised in accordance with Rule 3Q .0517 prior to its expiration date, for any of the following reasons:

- A. Additional applicable requirements become applicable to the facility with remaining permit term of three or more years.
- B. Additional requirements, including excess emissions requirements, become applicable to this source under Title IV of the Clean Air Act. Excess emissions offset plans for this source shall become part of this permit upon approval by the U.S. EPA.
- C. The Director or the U.S. EPA finds that a material mistake or that inaccurate statements were made in establishing the emissions standards or other terms or conditions of this permit.
- D. The Director or the U.S. EPA determines that the permit must be revised or revoked to assure compliance with the applicable requirements.

2.28 Construction and Operation Permits [Sections 3Q .0100 and .0300]

A construction and operating permit shall be obtained by the permittee for any proposed new or modified facility or emission source which is not exempted from having a permit prior to the beginning of construction or modification; in accordance with all applicable provisions of Sections 3Q .0100 and .0300.

2.29 Permit Modifications [Rules 3Q .0514, .0515, .0516, .0517, .0523 and .0524]

- A. Permit modifications may be subject to the requirements of Rules 3Q .0514, .0515, .0516 and .0524.
- B. Changes made pursuant to Rules 3Q .0523(a) and (b) do not require a permit modification.
- C. The permittee shall submit an application for reopening for cause in accordance with Rule 3Q .0517 if notified by this Office.
- D. To the extent that emissions trading is allowed under FCAQTC Subchapter 3D, including subsequently adopted maximum achievable control technology standards, emissions trading shall be allowed without permit revision pursuant to Rule 3Q .0523(c).

2.30 Insignificant Activities [Rules 3Q .0503 and .0508(i)(15)]

Because an emission source or activity is insignificant does not mean that the emission source or activity is exempted from any applicable requirement or that the owner or operator of the source is exempted from demonstrating compliance with any applicable requirement. The permittee shall have available at the facility at all times and made available to an authorized representative of this Office upon request, documentation, including calculations if necessary, to demonstrate that an emission source or activity is insignificant.

2.31 Standard Application Form and Required Information [Rules 3Q .0505 and .0507]

The permittee shall submit applications and required information in accordance with the provision of Rules 3Q .0505 and .0507.

2.32 Property Rights [Rule 3Q .0508(i)(8)]

This permit does not convey any property rights of any sort, or any exclusive privileges.

2.33 Refrigerant Requirements (Stratospheric Ozone and Climate Protection) [Rule 3Q .0508(b)]

- A. If the permittee has appliances or refrigeration equipment, including air conditioning equipment, which use Class I or II ozone-depleting substances such as chlorofluorocarbons and hydrochlorofluorocarbons listed as refrigerants in 40 CFR 82 Subpart A, Appendices A and B, the permittee shall service, repair, and maintain such equipment according to the work practices and personnel certification requirements, and the permittee shall use certified recycling and recovery equipment specified in 40 CFR 82 Subpart F.
- B. The permittee shall not knowingly vent or otherwise release any Class I or II

substance into the environment during the repair, servicing, maintenance, or disposal of any such device except as provided in 40 CFR 82 Subpart F.

- C. The permittee shall comply with all reporting and recordkeeping requirements of 40 CFR 82.166. Reports shall be submitted to the U.S. EPA or its designee as required.

2.34 Prevention of Accidental Releases - Section 112(r) [Rule 3Q .0508(h)]

If the permittee is required to develop and register a risk management plan pursuant to Section 112(r) of the federal Clean Air Act, then the permittee is required to register this plan in accordance with 40 CFR Part 68.

2.35 Title IV Allowances [Rule 3Q .0508(i)(1)]

The facility's emissions are prohibited from exceeding any allowances that the facility lawfully holds under Title IV of the Clean Air Act. This permit shall not limit the number of allowances held by the permittee, but the permittee may not use allowances as a defense to noncompliance with any other applicable requirement.

2.36 Air Pollution Alert, Warning or Emergency [Section 3D .0300]

Should the Director of this Office declare an Air Pollution Alert, Warning or Emergency, the permittee will be required to operate in accordance with the permittee's previously approved Emission Reduction Plan or, in the absence of an approved plan, with the appropriate requirements specified in Section 3D .0300.

2.37 Registration of Air Pollution Sources [Rule 3D .0202]

The Director of this Office may require the permittee to register a source of air pollution. If the permittee is required to register a source of air pollution, this registration and required information shall be in accordance with Rule 3D .0202(b).

2.38 Ambient Air Quality Standards [Rule 3D .0501(e)]

In addition to any control or manner of operation necessary to meet emission standards specified in this permit, any source of air pollution shall be operated with such control or in such manner that the source shall not cause the ambient air quality standards in Rule 3D .0400 to be exceeded at any point beyond the premises on which the source is located. When controls more stringent than named in the applicable emission standards in this permit are required to prevent violation of the ambient air quality standards or are required to create an offset, the permit shall contain a condition requiring these controls.

2.39 Odor [Rule 3D .0522] *Locally Enforceable Only*

The permittee shall not cause or permit the emission of odors beyond the facility's property lines which are harmful, irritating or which unreasonably interfere with the use and enjoyment of any person's properties or living conditions, or any public properties or

facilities. Such odors are prohibited by Rule 3D .0522. No violation shall be cited, provided that the best practical treatment, maintenance, and control of odor(s) currently available are used. This requirement does not apply to normal agricultural practices, nor to accidental emissions of odors which are not normally produced during routine operations and activities as determined by the Director.

2.40 Fugitive Dust Control Requirement [Rule 3D .0540]

The permittee shall not cause or allow fugitive dust emissions to cause or contribute to substantive complaints or excess visible emissions beyond the property boundary. If substantive complaints or excessive fugitive dust emissions from the facility are observed beyond the property boundaries for six minutes in any one hour (using Reference Method 22 in 40 CFR 60, Appendix A), the owner or operator may be required to submit and implement a fugitive dust control plan as described in 3D .0540(f).

New Source Performance Standards (NSPS) General Provisions - Permit Conditions

2.41 NSPS - General provisions [40 CFR 60 Subpart A and Rule 3D .0524]

The permittee shall comply with all applicable requirements specified in the general provisions of the New Source Performance Standards (40 CFR 60 Subpart A) including but not limited to requirements concerning notifications, testing, monitoring, recordkeeping, modifications and reconstruction.

2.42 NSPS - Good air pollution control practice [40 CFR 60.11(d) and Rule 3D .0524]

At all times, including periods of startup, shutdown, and malfunction, the permittee shall, to the extent practicable, maintain and operate any affected facility including associated air pollution control equipment in a manner consistent with good air pollution control practice for minimizing emissions.

2.43 NSPS - Circumvention [40 CFR 60.12 and Rule 3D .0524]

Permittee shall not build, erect, install, or use any article, machine, equipment or process, the use of which conceals an emission which would otherwise constitute a violation of an applicable standard under 40 CFR 60. Such concealment includes, but is not limited to, the use of gaseous diluents to achieve compliance with an opacity standard or with a standard which is based on the concentration of a pollutant in the gases discharged to the atmosphere.

2.44 NSPS - Maintain records - startup/shutdown/malfunction [40 CFR 60.7(b) and Rule 3D .0524]

The permittee shall maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of the affected facility; any malfunction of the air pollution control equipment; or any periods during which a continuous monitoring system or monitoring device is inoperative.

2.45 NSPS - Files available for inspection [40 CFR 60.7(f) and Rule 3D .0524]

The permittee shall maintain a file of all measurements, including, if applicable: performance test measurements; adjustments and maintenance performed on these systems or devices; monitoring device calibration checks; and all other information required in 40 CFR 60 . This file shall be kept in a permanent form suitable for inspection and shall be retained at least two years following the date of such measurements, maintenance, reports, and records.

2.46 NSPS - Performance testing facilities provided by permittee [40 CFR 60.8(e) and Rule 3D .0524]

For any performance testing, the permittee shall provide, or cause to be provided, performance testing facilities as follows:

- A. Sampling ports adequate for the applicable test methods. This includes:
 - 1. constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures and
 - 2. providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.
- B. Safe sampling platform(s) with safe access.
- C. Utilities for sampling and testing equipment.
- D. Unless otherwise specified in the applicable subpart, each performance test shall consist of three separate runs using the applicable test method. Each run shall be conducted for the time and under the conditions specified in the applicable standard. For purposes of determining compliance with an applicable standard, the arithmetic means of results of the three runs shall apply.

Compliance Assurance Monitoring for Major Stationary Sources (CAM) General Conditions - [40 CFR Part 64]

Following are conditions based on the requirements found in 40 CFR Part 64. These conditions only apply to sources subject to the CAM requirements.

2.47 CAM - Proper Maintenance <40 CFR 64.7(b)> [Rule 3D .0614]

At all times, the permittee shall maintain the monitoring equipment, including but not limited to, maintaining necessary parts for routine repairs of the monitoring equipment.

2.48 CAM - Continued Operation <40 CFR 64.7(c)> [Rule 3D .0614]

Except for, as applicable, monitoring malfunctions, associated repairs, and required

quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the permittee shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. Data recorded during monitoring malfunctions, associated repairs, and required quality assurance or control activities shall not be used for purposes of this part, including data averages and calculations, or fulfilling a minimum data availability requirement, if applicable. The permittee shall use all the data collected during all other periods in assessing the operation of the control device and associated control system. A monitoring malfunction is any sudden, infrequent, not reasonably preventable failure of the monitoring to provide valid data. Monitoring failures that are caused in part by poor maintenance or careless operation are not malfunctions.

2.49 CAM - Response to Excursions or Exceedances <40 CFR 64.7(d)> [Rule 3D .0614]

Upon detecting an excursion or exceedance, the permittee shall restore operation of the pollutant-specific emissions unit (including the control device and associated capture system) to its normal or usual manner of operation as expeditiously as practicable in accordance with good air pollution control practices for minimizing emissions. The response shall include minimizing the period of any startup, shutdown or malfunction and taking any necessary corrective actions to restore normal operation and prevent the likely recurrence of the cause of an excursion or exceedance (other than those caused by excused startup or shutdown conditions). Such actions may include initial inspection and evaluation, recording that operations returned to normal without operator action (such as through response by a computerized distribution control system), or any necessary follow-up actions to return operation to within the indicator range, designed condition, or below the applicable emissions limitation or standard, as applicable.

Determination of whether the permittee has used acceptable procedures in response to an excursion or exceedance will be based on information available, which may include but is not limited to, monitoring results, review of operation and maintenance procedures and records, and inspection of the control device, associated capture system, and the process. Based on the results of this determination, this Office may require the permittee to develop and implement a Quality Improvement Plan (QIP). The elements of a QIP are identified in 40 CFR 64.8(b).

2.50 CAM - Documentation of Need for Improved Monitoring <40 CFR 64.7(e)> [Rule 3D .0614]

After approval of the CAM plan, if the permittee identifies a failure to achieve compliance with an emission limitation or standard for which the approved monitoring did not provide an indication of an excursion or exceedance while providing valid data, or the results of compliance or performance testing document a need to modify the existing indicator ranges or designated conditions, the permittee shall promptly notify this Office and, if necessary, submit a proposed modification to this permit to address the necessary monitoring changes. Such a modification may include, but is not limited to, reestablishing indicator ranges or designated conditions, modifying the frequency of

conduction monitoring and collecting data, or the monitoring of additional parameters.

National Emission Standards for Hazardous Air Pollutants for Source Categories (NESHAP) General Conditions - [Rule 3D .1111]

Following are conditions found in the 40 CFR Part 63 NESHAP General Provisions. The following conditions only apply to sources subject to a relevant standard of a subpart of 40 CFR Part 63 except when otherwise specified in a particular subpart or in a relevant standard.

2.51 NESHAP - General Provisions <40 CFR 63 Subpart A> [Rule 3D .1111]

The permittee shall comply with all applicable requirements specified in the general provisions of the National Emission Standards for Hazardous Air Pollutants for Source Categories (40 CFR 63 Subpart A) including but not limited to requirements concerning notifications, testing, monitoring, recordkeeping, modifications, construction, and reconstruction.

2.52 NESHAP - Circumvention <40 CFR 63.4(b)> [Rule 3D .1111]

The permittee shall not build, erect, install, or use any article, machine, equipment or process to conceal an emission that would otherwise constitute noncompliance with a relevant standard. Such concealment includes, but is not limited to, the use of gaseous diluents to achieve compliance with a relevant standard based on the concentration of a pollutant in the effluent discharged to the atmosphere, the use of diluents to achieve compliance with a relevant standard for visible emissions, and the fragmentation of an operation such that the operation avoids regulation by a relevant standard.

2.53 NESHAP - Maintain Records <40 CFR 63.10(b)(2)> [Rule 3D .1111]

For affected sources, the permittee shall maintain relevant records of:

- A. the occurrence and duration of each startup, shutdown when the startup or shutdown causes the source to exceed any applicable emission limitation in the relevant emission standards;
- B. all maintenance performed on the air pollution control equipment;
- C. each period during which a CMS is malfunctioning or inoperative;
- D. all required measurement needed to demonstrate compliance with a relevant standard;
- E. all results of performance tests, CMS performance evaluations, and opacity and visible emission observations;
- F. all measurements as may be necessary to determine the conditions of performance tests and performance evaluations;
- G. all CMS calibration checks;
- H. all adjustments and maintenance performed on CMS;
- I. any information demonstrating whether a source is meeting the requirements for a waiver of recordkeeping or reporting requirements if the source has been granted a waiver under 40 CFR 63.10(f);
- J. all emission levels relative to the criterion for obtaining permission to use an

- alternative to the relative accuracy test if the source has been granted such permission under 40 CFR 63.8(f)(6); and
- K. all documentation supporting initial notifications and notifications of compliance status under 40 CFR 63.9.

2.54 NESHAP - Files Available for Inspection <40 CFR 63.10(b)(1)> [Rule 3D .1111]

The permittee shall maintain files of all information required by 40 CFR Part 63 recorded in a form suitable and readily available for expeditious inspection and review. The files shall be retained for at least five years following the date of each occurrence, measurement, maintenance, corrective action, report, or record. At a minimum, the most recent two years of data shall be retained on site. The remaining three years of data may be retained off site.

2.55 NESHAP - Performance Testing Facilities Provided by Permittee <40 CFR 63.7(d)> [Rule 3D .1111]

For any performance testing for each new source and, at the request of the Director, for each existing source, the permittee shall provide performance testing facilities as follows:

- A. Sampling ports adequate for test methods applicable to the affected source. This includes:
1. Constructing the air pollution control system such that volumetric flow rates and pollutant emission rates can be accurately determined by applicable test methods and procedures; and
 2. Providing a stack or duct free of cyclonic flow during performance tests, as demonstrated by applicable test methods and procedures.
- B. Safe sampling platform(s).
- C. Safe access to sampling platform(s).
- D. Utilities for sampling and testing equipment.
- E. Any other facilities that the Director deems necessary for safe and adequate testing of a source.
- F. Unless otherwise specified in the applicable subpart, each performance test shall be conducted according to the requirements in 40 CFR 63.7.

SECTION 3 SPECIFIC LIMITATIONS AND CONDITIONS

The emission source(s) and associated air pollution control device(s) listed below are subject to the following specific terms, conditions, and limitations, including the monitoring recordkeeping, and reporting requirements to which those requirements apply:

3.1 Facility-Wide Emission Source Conditions

A. Air toxics [Rules 3D .1100 and 3Q .0700] - *Local Enforcement Only*

1. **Air toxics - general** - Specification of a listed toxic air pollutant (TAP) in this permit does not excuse the permittee from complying with the requirements of Sections 3D .1100 and 3Q .0700 of the FCAQTC with regard to any other listed TAP emitted from the regulated facility, nor does this permit exempt the permittee from compliance with any future air toxics regulations promulgated pursuant to the requirements of the Clean Air Act. [Sections 3D .1100 and 3Q .0700]
2. **De minimis limits** - Total facility-wide emissions of the following pollutants, except those from the boilers ES-62, ES-62C, and ES-62E, and ES-62F which were exempt from the TAP program at the time the evaluation was performed, shall not exceed their respective de minimis emissions limits as shown in Rule 3Q .0711 unless a modeling demonstration is first approved by this Office which shows that the emissions of the subject TAPs from the facility will not adversely affect human health. This demonstration shall be in accordance with the requirements set forth in Sections 3D .1100 and 3Q .0700 of the FCAQTC. This demonstration must be made with an up-to-date version of a U.S. EPA approved computer model or, upon approval by this Office, calculated using the results of a previous modeling analysis showing compliance with the acceptable ambient levels for the pollutants listed below. [Section 3Q .0700]

<u>Pollutant (CAS Number)</u>	<u>De minimis level</u>
benzene (71-43-2)	8.1 lb/year
benzo(a)pyrene (50-32-8)	2.2 lb/year
formaldehyde (50-00-0)	0.04 lb/hour
n-hexane (110-54-3)	23 lb/day
toluene (108-88-3)	14.4 lb/hour and 98 lb/day

3. **Air toxic pollutant recordkeeping** - The permittee shall maintain updated records of production rates, throughputs, material usage, and other process operational information as is necessary to determine compliance with the

emission rates specified in permit condition **3.1(A)(2)**. At a minimum these records shall include data sufficient to calculate monthly averaged emission rates (in pounds per hour of emission source operation) for TAPs with 1-hour or 24-hour emission limits and yearly emission rates (in pounds per calendar year) for TAPs with annual emission limits.

Copies of these records shall be retained by the permittee for a period of three years after the date on which the record was made.

If requested by an agent of this Office, the permittee shall readily supply copies of these records at the time of inspection. Likewise, the permittee shall submit copies of the records upon request by this Office. **[Rules 3D .0605, 3D .1105, and 3Q .0308(a)(1)]**

B. Prevention of Significant Deterioration (PSD) [Rules 3D .0530 and 3Q .0317]

1. **Maximum daily production rate** [Rules 3D .0530 and 3Q .0317] - The permittee shall limit the grind rate of corn at the facility to a maximum of 80,000 bushels per day based on a three day average throughput. The total grind rate for any 365 day period shall not exceed 29,200,000 bushels of corn in order to avoid the applicability of Rule 3D .0530 for sulfur dioxide emissions from the modification undertaken in August 2006 (#00732-TV-6)..
2. **Recordkeeping requirement** [Rules 3D .0530 and 3Q .0317(b)] - The permittee shall record and maintain a record of the grind rate in bushels of corn per day in a log (written or electronic form). These records shall also include a three day rolling average of the grind rate during actual operating days to ensure compliance with the maximum grind rate. These records shall be totaled for the previous 365 day period to obtain the total 365 day grind rate. These records are to be kept on site and shall be made available for inspection by Office personnel.
3. **Reporting** [Rule 3D .0530 and 3Q .0317(b)] - The permittee shall submit the grind rate records as described in condition **3.1(B)(2)** to this Office by January 30th for the period July through December, and by July 30th for the period January through June. The permittee shall include a report of the daily grind rate during the alternate operating scenario (AOS) as separate from the average daily grind rate during normal operation. However, the average daily grind rate for the AOS shall be included in the totals for calculating the annual production rate for the six month reporting period.

C. Control of Visible Emissions [Rule 3D .0521] - This regulation applies to all emission sources at this facility unless otherwise specified in the specific conditions.

1. **Standard for all emission sources unless otherwise specified** [Rule 3D .0521(d)] - For sources manufactured after July 1, 1971, visible emissions shall not be more than 20% opacity when averaged over a six-minute period. However, six-minute averaging periods may exceed 20% opacity if:

- (a) No six-minute period exceeds 87% opacity;
 - (b) No more than one six-minute period exceeds 20% opacity in any hour; and
 - (c) No more than four six-minute periods exceed 20% opacity in any 24-hour period.
2. **Testing** [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)] - If emissions testing is required by this Office or the U.S. EPA, or the permittee submits emissions testing to the Division in support of a permit application, the permittee shall perform such testing in accordance with the appropriate U.S. EPA reference method(s) as approved by this Office. The permittee may request approval from this Office for an alternate test method or procedure in writing.
3. **Monitoring and recordkeeping requirements** [Rule 3Q .0508(f)] - The permittee shall make a qualitative **monthly** observation of the stacks/vents ducting emissions from each source. The permittee shall keep a monthly log of this visible emission stack observation. The log shall contain the following:
- (a) the date and time of visual observation;
 - (b) the person(s) who performed visual observation;
 - (c) the results of the visual observation (note color, duration, density (heavy or light), and include identifying stacks where visible emissions occurred);
 - (d) the operating conditions under which the visual observation was conducted; and
 - (e) any actions taken to reduce the visible emissions.
4. **Reporting** [Rule 3Q.0508(f)(1)] - The permittee shall submit a summary report of the monitoring requirements specified in condition **3.1(C)(3)** to this Office by January 30th for the period July through December, and by July 30th for the period January through June. This report shall include the percentage of operational days in the reporting period for which a visible emission observation was made for EP-AO, EP-G, and EP-N.

- 3.2 **ES-11A Corn Receiving including Corn Unloading and Corn Storage Silos 1 through #3, controlled by Fabric Filters W115891, W115894, W115895, and W115803; and**
ES-11B Corn Cleaning including Corn Transport, Corn Cleaner, and Corn Cleaning Silos #1 and #2, controlled by Fabric filters W115896, W115824, W115825, and W115832; and
ES-25 Mill Products Loading including MPL Dust Collector, Gluten Silo, #1 Feed Silo, Inline Feed Silo, #2 Feed Silo, #1 Germ Silo, Inline Germ Silo, and Railcar Transport Blower controlled by Fabric Filters W255897, W258891, W258896, W258895, W258897, W248893, W258894 and W258898; and
ES-32 Starch Storage and Loading including Starch Silo and Starch Loading Dust System, controlled by Fabric Filters W328891, and W325892; and
ES-83 Carbon Storage, controlled by Fabric Filter W838891; and
ES-85 Filter Aid Storage, controlled by Fabric Filter W858893

The following provides a summary of the limits and/or standards for the emission source(s) described above.

Regulated Pollutant	Applicable Standard	ES-#	Applicable Regulation
Particulate Matter	$E = (55.0 \times P^{0.11}) - 40$ when operating at process rates greater than 60,000 lb/hr; and $E = 4.10 \times P^{0.67}$ when operating at process rates equal to or less than 60,000 lb/hr where; E = allowable PM emission rate in lb/hr, and P = process weight in tons/hr	ES-11A, ES-11B, ES-25, ES-32, ES-83, and ES-85	3D .0515
Visible Emissions	20 percent opacity		3D .0521(d) - see condition 3.1(C) for requirements (see below for frequency of visible observations for Railcar Transport Blower of ES-25, ES-83, and ES-85)

A. Particulates from Miscellaneous Industrial Processes - Corn Receiving (ES-11A), Corn Cleaning (ES-11B), Mill Products Loading (ES-25), Starch Storage And Loading (ES-32), Carbon Storage (ES-83), and Filter Aid Storage (ES-85) [Rule 3D .0515]

1. Standard/Operation requirements [Rule 3D .0515] -

- (a) **Emission limit for ES-11A** - Particulate matter emissions from each of the processes in ES-11A (Corn Unloading, Storage Silo #1, Storage Silo #2, and Storage Silo #3) shall not exceed the allowable emissions rate calculated by the applicable formula in the above table. Accordingly, the potential emission rate from each of these processes shall at no times exceed 73.1 lb/hr based on maximum production.
- (b) **Emission limit for ES-11B** - Particulate matter emissions from each of the processes in ES-11B (Corn Transport, Corn Cleaner, Corn Cleaning Silo #1, and Corn Cleaning Silo #2) shall not exceed the allowable emissions rate calculated by the applicable formula in the above table. Accordingly, the potential emission rate from each of these processes shall at no times exceed 57.5 lb/hr based on maximum production.
- (c) **Emission limit for ES-25** - Particulate matter emissions from the processes in ES-25 shall not exceed the allowable emissions rate calculated by the applicable formula in the above table. Accordingly, the potential emissions from these processes shall at no times exceed the following emissions rates based on maximum production:

<u>Emission Source Description</u>	<u>Maximum Allowable Emission Rate</u>
MPL Dust Collector	55.4 lb/hr
Gluten Silo	11.7 lb/hr
#1 Feed Silo	27.5 lb/hr
Inline Feed Silo	27.5 lb/hr
#2 Feed Silo	27.9 lb/hr
#1 Germ Silo	13.9 lb/hr
Inline Germ Silo	13.9 lb/hr
Railcar Transport Blower	25.2 lb/hr

- (d) **Emission limit for ES-32** - Particulate matter emissions from the processes in ES-32 shall not exceed the allowable emissions rate calculated by the applicable formula in the above table. Accordingly, the potential emissions from these processes shall at no times exceed the following emissions rates based on maximum production:

<u>Emission Source Description</u>	<u>Maximum Allowable Emission Rate</u>
Starch Silo	22.3 lb/hr
Starch Loading Dust System	44.6 lb/hr

- (e) **Emission limit for ES-83** - Particulate matter emissions from the Carbon Silo shall not exceed the allowable emissions rate calculated by the applicable formula in the above table. Accordingly, the potential emission rate from this process shall at no times exceed 15.1 lb/hr based on maximum production.
- (f) **Emission limit for ES-85** - Particulate matter emissions from the Filter Aid Silo shall not exceed the allowable emissions rate calculated by the applicable formula in the above table. Accordingly, the potential emission rate from this process shall at no times exceed 8.56 lb/hr based on maximum production.
2. **Testing** [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)] - The permittee shall follow the testing requirements specified in condition **3.1(C)(2)**.
3. **Monitoring requirement** [Rule 3Q .0508(f)] - The permittee shall follow the monitoring requirements for visible emissions in condition **3.1(C)**. In addition to monitoring visible emissions, and to ensure that optimum control efficiency is maintained, the permittee shall perform inspections and preventative maintenance in a manner consistent with good practice for minimizing emissions. As a minimum, the qualitative visible observation for fabric filters W258898, W838891, and W858893 must include the following:
- (a) **For Railcar Transport Blower of ES-25, Carbon Silo (ES-83), and Filter Aid Silo (ES-85)** - The permittee shall perform a qualitative observation of the stack ducting emissions from these sources once per day each day that the source is operating.
Or,
- (b) **Alternative Monitoring for Railcar Transport Blower of ES-25, Carbon Silo (ES-83), and Filter Aid Silo (ES-85)** – As an alternative to performing a qualitative observation noted in permit condition **3.2(C)(3)(a)** above, the permittee may perform a monthly preventative maintenance inspection of the fabric filters. The preventative maintenance inspections shall include the following items:
- (i) check fabric filter differential pressures;
 - (ii) check blow-down pressures and cycles;
 - (iii) inspect structural integrity of fabric filters;
 - (iv) check fabric filter mechanical operating components to ensure proper operation;
 - (v) oil fabric filter mechanical components as needed;
 - (vi) inspect blower belts and filters and replace as needed; and
 - (vii) inspect fabric filter bags, if indicated, and replace as required.

4. **Recordkeeping requirement** [Rule 3Q .0508(f)] - The results of all monitoring activities in permit condition **3.2(A)(3)(a)** shall be recorded in a log (written or electronic form). The log shall be maintained on site and shall contain the following records:
- (a) **For Railcar Transport Blower of ES-25, Carbon Silo (ES-83), and Filter Aid Silo (ES-85) -**
- (i) the date and time of visual observation;
 - (ii) the person(s) who performed visual observation;
 - (iii) the results of the visual observation (note color, duration, density (heavy or light), and include identifying stacks where visible emissions occurred);
 - (iv) any actions taken to reduce the visible emissions; and
 - (v) the date and time a qualitative observation can't be obtained due to adverse weather conditions or darkness.
5. **Recordkeeping requirement for Alternative Monitoring** [Rule 3Q .0508(f)] - The results of all monitoring activities in permit condition **3.2(A)(3)(b)** shall be recorded in a log (written or electronic form). The log shall be maintained on site and shall contain the following records:
- (a) **Recordkeeping for Railcar Transport Blower of ES-25, Carbon Silo (ES-83), and Filter Aid Silo (ES-85) -**
- (i) the date and time of preventative monitoring inspection;
 - (ii) the person(s) who performed inspections;
 - (iii) the results of the preventative maintenance inspections;
 - (iv) any corrective actions taken as a result of the preventative maintenance inspections.
6. **Reporting requirement** [Rule 3Q .0508(f)(1)] - The permittee shall submit a summary report of the monitoring requirements specified in condition **3.2(A)(3)** to this Office by January 30th for the period July through December, and by July 30th for the period January through June. The report shall include the number of qualitative observations conducted during the reporting period for the Railcar Transport Blower of ES-25, Carbon Silo (ES-83), and Filter Aid Silo (ES-85) and the number of days each source was in operation during the reporting period. The report shall also include the dates the preventative maintenance inspections were performed and state whether the inspections were used as an alternative monitoring method in the reporting period in lieu of performing the qualitative observations for the stack visual emissions.

- 3.3 **ES-15 Wet Milling including Gluten Filter Vacuum Pumps, Uncontrolled, and Germ Separation, controlled by Scrubber W628893; and**
ES-21 Gluten Drying and Cooling, controlled by Cyclone W215893 and Scrubber W628893; and
ES-23 Feed Drying and Cooling, controlled by Cyclones W235893, W235892, and W235813, Scrubbers W628891, W628851, W628892, and W628893; and
ES-81 Sulfur Burner, controlled by Scrubber W818806

The following provides a summary of the limits and/or standards for the emission source(s) described above.

Regulated Pollutant	Applicable Standard	ES-#	Applicable Regulation
Sulfur Dioxide	0.88 lb SO ₂ /hr on a 24 hr average from emission point AA (Gluten Filter Vacuum Pumps)	ES-15	40 CFR 51.166, 3D .0530, and 3Q .0317
Sulfur Dioxide	Combined total of 3.3 lb SO ₂ /hr on a 24 hr average from emission point R (Advanced Industries Technology Wet Scrubber) from all contributing sources		40 CFR 51.166, 3D .0530, and 3Q .0317
Sulfur Dioxide	0.1 lb SO ₂ /hr on a 24 hr average	ES-81	40 CFR 51.166, 3D .0530, and 3Q .0317
Particulate Matter	$E = 4.10 \times P^{0.67}$ where; E = allowable PM emission rate in lb/hr, and P = process weight in tons/hr	ES-21, and ES-23	3D .0515
Visible Emissions	20 percent opacity	ES-15, ES-21, ES-23, and ES-81	3D .0521(d) - see condition 3.1(C) for requirements

- A. **Prevention of Significant Deterioration (Sulfur Dioxide) - Wet Milling (ES-15), Sulfur Burner System (ES-81) [Rules 3D .0530 and 3Q .0317]** - These emission sources have federally enforceable limits applied to them to avoid the provisions of Rule 3D .0530. Should any of the following conditions be violated, this facility may become subject to

this rule.

1. **Emission requirements** [Rules 3D .0530 and 3Q .0317] -

- (a) **Emission limit for emission point AA (ES-15)** - Emissions of sulfur dioxide from the Gluten Filter Vacuum Pumps shall not exceed 0.88 pounds per hour based on a 24-hour average. This rate represents 75 percent sulfur dioxide reduction at 80,000 bushel/day production rate. In order to demonstrate compliance with this emission rate, the permittee shall control the pH levels of the Gluten Filter Vacuum Pump water to achieve a 75 percent reduction by maintaining the pH levels at or above 5.0.
- (b) **Emission limit for emission point R (ES-15, 21, and 23)** - Combined total emissions of sulfur dioxide from the Scrubber W628893 shall not exceed 3.3 pounds per hour based on a 24-hour average for all contributing sources. This rate represents 75 percent sulfur dioxide reduction at 80,000 bushel/day production rate. In order to demonstrate compliance with this emission rate, the permittee shall control the pH levels of the Scrubber W628893 water to achieve a 75 percent reduction by maintaining the pH levels at or above 5.0.
- (c) **Emission limit for ES-81** - Emissions of sulfur dioxide shall not exceed 0.1 pounds per hour based on a 24-hour average. In order to demonstrate compliance with this emission rate, the permittee shall control the pH levels of the Scrubber W818806 water by maintaining the pH levels at or above 5.5.

2. **Testing** [Rules 3D .2602(i) and 3Q .0508(n)(2) and (b)] - The permittee shall follow the testing requirements specified in condition **3.1(C)(2)**.

3. **Monitoring requirement** [Rules 3D .0530, 3Q .0317, and 3Q .0508(f)] - The permittee shall continuously monitor the pH values of the Gluten Filter Vacuum Pumps seal water, the Scrubber W628893 water, and the Scrubber W818806 water with a probe which shall be connected to a controller to regulate the caustic addition to the water and a 24-hour average shall be calculated. The permittee shall manually check the pH of the Gluten Filter Vacuum Pumps seal water, the Scrubber W628893 water, and the Scrubber W818806 water on a daily basis for comparison to the continuous monitor readings. The continuous pH monitors shall be recalibrated if the difference between the manual pH readings and the continuous pH readings is greater than 0.30, if the lowest reading is less than 0.30 pH above the required compliance pH value. As a minimum, the continuous pH monitors shall be recalibrated on a monthly basis.

The manual checks of the pH must be performed for at least 90 percent of the operating days at the facility during the six-month reporting period and the recalibration of the continuous pH monitors when the difference between the manual pH readings and the continuous pH readings is greater than 0.30, if the lowest reading is less than 0.30 pH above the required compliance pH value, must be performed for at least 90 percent of the operating days at the facility during the six-month reporting period to ensure compliance with this requirement.

4. **Recordkeeping requirement** [Rules 3D .0530, 3Q .0317, and 3Q .0508(f)] - The daily pH of the Gluten Filter Vacuum Pumps seal water, the Scrubber W628893, and the Scrubber W818806 water obtained during manual pH readings and the average daily pH shall be recorded in a log to be kept on site along with the continuous monitor pH reading at the time of the manual check. The log shall also contain records of all calibration and maintenance dates of the pH monitoring equipment.
5. **Reporting requirement** [Rules 3D .0530, 3Q .0317(b), and 3Q .0508(f)(1)] - The permittee shall submit a summary report of the monitoring requirements specified in condition 3.3(A)(3) to this Office by January 30th for the period July through December, and by July 30th for the period January through June. This report shall include the percentage of operational days in the reporting period for which manual pH readings were recorded and the percentage of days in the reporting period for which a recalibration of the continuous pH monitors was performed as required in condition 3.3(A)(3).

B. Particulates from Miscellaneous Industrial Processes - Gluten Drying and Cooling (ES-21), and Feed Drying and Cooling (ES-23) [Rule 3D .0515]

1. **Standard/Operation requirements** [Rule 3D .0515] -
 - (a) **Emission limit for ES-21** - Particulate matter emissions from the Gluten Dryer and Cooler shall not exceed the allowable emissions rate calculated by the formula in the above table. Accordingly, the potential emissions from these processes shall at no times exceed 11.6 lb/hr based on maximum production.
 - (b) **Emission limit for ES-23** - Particulate matter emissions from the processes in ES-23 shall not exceed the allowable emissions rate calculated by the formula in the above table. Accordingly, the potential emissions from these processes shall at no times exceed the following emissions rates based on maximum production:

<u>Emission Source Description</u>	<u>Maximum Allowable Emission Rate</u>
#1 Feed Cooler	13.7 lb/hr
#2 Feed Cooler	13.7 lb/hr

2. **Testing** [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)] - The permittee shall follow the testing requirements specified in condition 3.1(C)(2).
3. **Monitoring and recordkeeping requirements** [Rule 3Q .0508(f)] - The permittee shall follow the monitoring and recordkeeping requirements for visible emissions in condition 3.1(C)(3).
4. **Reporting requirement** [Rule 3Q .0508(f)(1)] - The permittee shall follow the reporting

requirements for visible emissions in condition 3.1(C)(4).

3.4 ES-31 Starch Drying, controlled by Scrubbers W318894 and W318896

The following provides a summary of the limits and/or standards for the emission source(s) described above.

Regulated Pollutant	Applicable Standard	ES-#	Applicable Regulation
Particulate Matter	$E = 4.10 \times P^{0.67}$ where; E = allowable PM emission rate in lb/hr, and P = process weight in tons/hr	ES-31	3D .0515
Sulfur Dioxide*	2.3 lb SO ₂ /MMBtu	ES-31	3D .0516
Visible Emissions	20 percent opacity	ES-31	3D .0521(d) - see condition 3.1(C) for requirements

*3D .0516 - *Sulfur Dioxide Emissions from Combustion Sources* applies to the natural gas dryers associated with this emission unit. Use of only natural gas assures compliance with this standard. No monitoring, recordkeeping, or reporting is required to assure compliance. However, the permittee shall maintain the appropriate records for raw material usage and/or production rates in order to calculate the emissions data needed for condition 2.13 entitled, *Annual Emission Inventory Requirements*.

A. Particulates from Miscellaneous Industrial Processes - Starch Drying (ES-31) [Rule 3D .0515]

1. Standard/Operation requirements [Rule 3D .0515] -

(a) **Emission limit for ES-31** - Particulate matter emissions from each of the emission points in ES-31 (Scrubbers W318894 and W318896) shall not exceed the allowable emissions rate calculated by the formula in the above table. Accordingly, the potential emission rate from each of these emission points shall at no times exceed 11.2 lb/hr based on maximum production.

2. **Testing** [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)] - The permittee shall follow the testing requirements specified in condition 3.1(C)(2).

3. **Compliance Assurance Monitoring and recordkeeping requirements** [Rules 3D .0614 and 3Q .0508(f)] - In order to demonstrate compliance with the CAM plan for the wet scrubbers, the following monitoring and recordkeeping requirements apply:

(a) The permittee shall follow the monitoring and recordkeeping requirements for visible emissions in condition 3.1(C)(3). An excursion is defined as the presence of a visible

emission, except for the presence of water vapor, from either stack. If a visible emission is noted, the applicant shall conduct an investigation into the cause and take the appropriate corrective action to mitigate the emissions.

- (b) The permittee shall continuously monitor for the presence or absence of scrubber flow water to Scrubbers W318894 and W318896 during operation of ES-31. The presence of water to the scrubbers will provide assurance that the PM emissions are being controlled and maintained below the allowable limit. An excursion is defined as when the system is in operation and there is no water flow to or from the scrubber for a continuous six minute period during any operational day. In addition, validation of the operation of the flow sensing device shall be conducted monthly.
- (c) The permittee shall conduct an annual internal inspection of Scrubbers W318894 and W318896 to ensure proper operation. An excursion is identified as any inspection which reveals the internal components of the scrubbers have been affected in a way that the scrubbers no longer operate as designed. An excursion will require the applicant to conduct an investigation into the cause and take appropriate corrective action to repair the internal components.

The results of all monitoring activities shall be recorded in a log (written or electronic form). The log shall be maintained on site and shall be made available to Office personnel.

4. **Reporting requirement** <40 CFR 64.9> [Rules 3D .0614 and 3Q .0508(f)(1)] – The permittee shall submit the following report:
- (a) A summary report of the compliance assurance monitoring required in permit condition **3.4(A)(3)** including, as a minimum:
 - (i) Summary information on the number, duration and cause (including unknown cause, if applicable) of excursions or exceedances, as applicable, and the corrective actions taken;
 - (ii) Summary information on the number, duration and cause (including unknown cause, if applicable) for monitor downtime incidents (other than downtime associated with calibration checks, if applicable); and
 - (iii) A description of the actions taken to implement a QIP (if required by this Office) during the reporting period as specified in 40 CFR 64.8. Upon completion of a QIP, the owner or operator shall include in the next summary report documentation that the implementation of the plan has been completed and reduced the likelihood of similar levels of excursions or exceedances occurring.

This report shall be received by this Office by January 30th for the period July through December and by July 30th for the period January through June.

3.5 ES-62C Keeler Hybrid Suspension Grate Boiler designed to burn wet biomass/bio-based solid, controlled by Multicyclone 62SFB1 and ESP 62SFB2

The following provides a summary of the limits and/or standards for the emission source(s) described above.

Regulated Pollutant	Applicable Standard	Applicable Regulation
Particulate Matter	0.1 lb/MMBtu	40 CFR 51.166, 40 CFR 60.43b, 3D .0530, and 3D .0524
Nitrogen Oxides	0.6 lb NO _x /MMBtu	40 CFR 51.166, 40 CFR 60.44b, 3D .0530, and 3D .0524
Sulfur Dioxide	310 lb SO ₂ /hr	40 CFR 51.166 and 3D .0530
Sulfur Dioxide	Sulfur content of coal shall not exceed 0.9 percent	40 CFR 51.166 and 3D .0530
Sulfur Dioxide	Coal shall not be used to supply more than 95 percent of the boiler's thermal input in any 12-month rolling period	40 CFR 51.166 and 3D .0530
HCL	0.022 lb/MMBtu	40 CFR 63.7500(a)(1), Table 2, and 3D .1111
Mercury	5.7E-06 lb/MMBtu	40 CFR 63.7500(a)(1), Table 2, and 3D .1111
Carbon Monoxide (or demonstrate compliance with a continuous emissions monitor (CEM))	2,800 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; (or 900 ppm by volume on a dry basis corrected to 3 percent oxygen, 30-day rolling average)	40 CFR 63.7500(a)(1), Table 2, and 3D .1111
Filterable Particulate Matter (or Total Selected Metals (TSM))	0.44 lb/MMBtu (or 4.5E-04 lb/MMBtu)	40 CFR 63.7500(a)(1), Table 2, and 3D .1111
Visible Emissions	20 percent opacity	40 CFR 60.43b(f) and 3D .0524
Visible Emissions	10 percent opacity (daily block average)	40 CFR 63.7525(c), Table 8, and 3D .1111

A. Prevention of Significant Deterioration [Rule 3D .0530], New Source Performance Standards [Rule 3D .0524]

1. **Standard for Particulate Matter** [Rules 3D .0530 and 3D .0524] - Total particulate matter emissions shall not exceed 0.1 pounds per million Btu heat input as determined by U.S. EPA Reference Method 5 (40 CFR 60 - Appendix A, amended November 14, 1990, or the most recent approved version of the method at the time of testing). This limit shall be met with the use of a multicyclone followed by an electrostatic precipitator as Best Available Control Technology.

This standard shall apply at all times except during periods of startup, shutdown or malfunction.

2. **Testing** [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)] - The permittee shall follow the testing requirements specified in condition **3.1(C)(2)**.
3. **Periodic monitoring and recordkeeping requirements** [Rules 3D .0524 and 3Q .0508(f)] - The permittee shall monitor opacity as a surrogate to ensure the proper operation of the multicyclone and electrostatic precipitator. The permittee shall install, calibrate, maintain, and operate a continuous opacity monitor (COM) and record the output of the system in accordance with NSPS Subpart Db, 40 CFR 60.48b(a). The procedures under 40 CFR 60.13 shall be followed for installation, evaluation, and operation of the COM used to measure the opacity of emissions discharged to the atmosphere pursuant to NSPS Subpart Db, 40 CFR 60.48b(e) and Rule 3D .0524.
4. **Reporting requirement** [Rules 3D .0524 and 3Q .0508(f)(1)] - The permittee shall comply with all applicable recordkeeping and reporting requirements specified in 40 CFR 60.49b, including, but not limited to, the requirement to submit excess emissions reports for any excess emissions of opacity which occur during the six-month period. These reports shall be submitted no later than January 30th for the period July through December and no later than July 30th for the period January through June. If there are no excess emissions during the semiannual period, the permittee shall submit a report stating that no excess emissions occurred during the reporting period.
5. **Compliance Assurance Monitoring and recordkeeping requirements for particulate matter** <40 CFR Part 64> [Rules 3D .0614 and 3Q .0508(f)] - In order to demonstrate compliance with the CAM plan for the multicyclone and electrostatic precipitator, the following monitoring and recordkeeping requirements apply:
 - (a) The permittee shall monitor opacity as a surrogate to ensure the proper operation of the multicyclone and electrostatic precipitator using the COM required in permit condition **3.5(A)(3)**.
 - (b) The outlet opacity shall be continuously monitored to provide data for at least 90% of the operating hours in each steam generating unit day, in at least 27 out of 30 successive steam generating unit days.
 - (c) The outlet opacity readings are recorded at least four times equally spaced over an

hour for at least 90% of the operating hours.

- (d) The averaging period for the opacity readings shall be six minutes.
- (e) The permittee shall provide initial calibration of the COM in accordance with manufacturer's recommendation at startup. In addition, quarterly calibration of the COM shall be performed in accordance with manufacturer's recommended procedure. Preventative maintenance of the COM shall be performed on an annual basis.

An excursion is defined as data monitored greater than 12 percent opacity for more than three consecutive hours during an operation day, except for startup and shutdown. An excursion will trigger an investigation into its cause and the appropriate corrective action will be performed and documented.

6. **Reporting Requirement** <40 CFR 64.9> [Rules 3D .0614 and 3Q .0508(f)(1)] - The permittee shall submit the following report:
- (a) A summary report of the compliance assurance monitoring required in permit condition **3.5(A)(5)** including, as a minimum:
 - (i) Summary information on the number, duration and cause (including unknown cause, if applicable) of excursions or exceedances, as applicable, and the corrective actions taken;
 - (ii) Summary information on the number, duration and cause (including unknown cause, if applicable) for monitor downtime incidents (other than downtime associated with calibration checks, if applicable); and
 - (iii) A description of the actions taken to implement a QIP (if required by this Office) during the reporting period as specified in 40 CFR 64.8. Upon completion of a QIP, the owner or operator shall include in the next summary report documentation that the implementation of the plan has been completed and reduced the likelihood of similar levels of excursions or exceedances occurring.

This report shall be received by this Office by January 30th for the period July through December and by July 30th for the period January through June.

B. Prevention of Significant Deterioration [Rule 3D .0530], New Source Performance Standards [Rule 3D .0524]

1. **Standard for Nitrogen Oxides** [Rule 3D .0530 and 3D .0524] - Total nitrogen oxides emissions shall not exceed 0.6 pounds per million Btu heat input as determined by U.S. EPA Reference Method 7 (40 CFR 60 - Appendix A, amended November 14, 1990, or the most recent approved version of the method at the time of testing).

This standard shall apply at all times including periods of startup, shutdown, or malfunction. Compliance with this emission limit is determined on a 30-day rolling average basis.

2. **Testing** [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)] - The permittee shall follow the

testing requirements specified in condition **3.1(C)(2)**.

3. Monitoring requirements <40 CFR 60.48b(a)> [Rule 3D .0524 and 3Q .0508(f)] -

- (a) The permittee shall install, calibrate, maintain, and operate a continuous monitoring system for measuring nitrogen oxides emissions discharged to the atmosphere and record the output of the system. The continuous monitoring system for nitrogen oxides shall be operated and data recorded during all periods of operation, except for continuous monitoring system breakdowns and repairs.
- (b) When nitrogen oxides emission data are not obtained because of continuous monitoring system breakdowns, repairs, calibration checks and zero and span adjustments, emission data will be obtained by using standby monitoring systems, Method 7, Method 7A, or other approved reference methods to provide emission data for a minimum of 75 percent of the operating hours in each steam generating unit day, in at least 22 out of 30 successive steam generating unit days.

4 Recordkeeping and reporting requirements <40 CFR 60.49b> [Rules 3D .0524 and 3Q .0508(f)(1)] -

- (a) The permittee shall comply with applicable recordkeeping and reporting requirements specified in 40 CFR 60.49b, including, but not limited to, the requirement to submit written excess emissions reports based on the data recorded by the continuous emissions monitoring system (CEM) for nitrogen oxides and opacity. These reports shall be submitted no later than January 30th for the period July through December and no later than July 30th for the period January through June.
- (b) The CEM must be maintained, calibrated, operated and audited in accordance with 40 CFR 60, Appendix F quality assurance procedures. A data assessment report (DAR) which includes as a minimum the results of CEM accuracy assessments and all corrective actions taken when the CEM was determined to be out of control shall be filed with this Office. This report shall be submitted with the excess emissions report and received by this Office no later than January 30th for the period July through December and no later than July 30th for the period January through June.

C. Prevention of Significant Deterioration [Rule 3D .0530]

1. Standards for Sulfur Dioxide [Rule 3D .0530] -

- (a) Total emissions of sulfur dioxide shall not exceed 310 pounds per hour.
- (b) The sulfur content of coal shall not exceed 0.90% by weight.
- (c) Coal shall not be used to supply more than 95.0% of the boiler's thermal input in any consecutive 12 month period.

2. Testing [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)] - The permittee shall follow the testing requirements specified in condition **3.1(C)(2)**.

3. **Monitoring** [Rule 3Q .0508(f)] - A gross sample of coal shall be obtained from each truckload of coal shipped to the permittee from the coal mine site and the combined samples analyzed monthly for Btu, sulfur, and ash content by the coal mine's ASTM certified laboratory of choice in accordance with the following ASTM methods, or equivalent ASTM methods approved by this Office:
 - (a) D2234 - Collection of a Gross Sample of Coal
 - (b) D2013 - Methods for Preparing Coal Samples for Analysis
 - (c) D5865-99 - Gross Calorific Value of Coal and Coke by the Isoperibol Methods
 - (d) D4239 - Sulfur in Ash from Coal and Coke using High-Temperature Tube Furnace Combustion Method
 - (e) D3174 - Ash in the Analysis of Coal and Coke

4. **Recordkeeping and reporting requirements** [Rule 3Q .0508(f)] - All data generated by the sulfur content analysis specified in condition **3.5(C)(3)** shall be submitted to this Office on a semiannual basis. The report shall be received by this Office no later than January 30th for the period July through December and no later than July 30th for the period January through June. The following provisions also apply:
 - (a) Laboratory records of sample testing shall include documentation of the calibration and verification runs made for each piece of analytical equipment.
 - (b) Upon request of Office personnel, the permittee shall obtain a split sample and submit it to a certified commercial laboratory of this Office's choosing for analysis.

D. New Source Performance Standards (NSPS) Subpart Db Conditions [Rule 3D .0524]

1. **Monitoring and recordkeeping requirements** <40 CFR 60.49b(d)> [Rules 3D .0524 and 3Q .0508(f)] - The permittee shall record and maintain records of the total amount of coal, wood, corn cleanings, corn germ, and dry and wet feed burned in the boiler each month. The log should also include the date and time each fuel is burned.
2. **Reporting requirement** [Rules 3D .0524 and 3Q .0508(f)(1)] - The permittee shall submit the monthly total of each fuel burned in the boiler to this Office on a semiannual basis. The report shall be received by this Office no later than January 30th for the period July through December and no later than July 30th for the period January through June.

E. Control of Visible Emissions [Rule 3D .0524]

1. **Standard** [Rule 3D .0524] - Visible emissions shall not exceed 20% opacity (six-minute average), except for one six-minute period per hour of not more than 27% opacity, in accordance with 40 CFR 60.43b(f). The opacity standard applies at all times, except during periods of startup, shutdown or malfunction.
2. **Testing** [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)] - The permittee shall follow the testing requirements specified in permit condition **3.1(C)(2)**.

3. **Monitoring and recordkeeping requirements** [Rules 3D .0524 and 3Q .0508(f)] - The permittee shall follow the monitoring and recordkeeping requirements specified in condition **3.5(A)(2)**.
 4. **Reporting requirements** [Rules 3D .0524 and 3Q .0508(f)(1)] - The permittee shall follow the reporting requirements specified in permit condition **3.5(A)(3)**.
- F. National Emission Standards for Hazardous Air Pollutants for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters [Rule 3D .1111 and 40 CFR 63 Subpart DDDDD]**
1. **Compliance date** <40 CFR 63.7510(e) and 63.7495> [Rule 3D .1111]
The permittee must comply with this subpart no later than January 31, 2016. An initial demonstration of compliance with the emissions standards through stack testing and/or fuel analysis shall be completed no later than July 29, 2016 (180 days after the compliance date).
 2. **Standard for hydrogen chloride** <40 CFR 63.7500(a)(1)> [Rule 3D .1111] - Total hydrogen chloride emissions shall not exceed 0.022 pounds per million Btu heat input as determined by U.S. EPA Reference Methods 26 or 26A (40 CFR 60 - Appendix A, amended November 14, 1990, or the most recent approved version of the method at the time of testing).

This standard shall apply at all times except during periods of startup or shutdown. When compliance is determined by using Method 26, a minimum of 1 dscm per run must be collected. When compliance is determined by using Method 26A, a minimum of 120 liters per test run must be collected.
 3. **Standard for mercury** <40 CFR 63.7500(a)(1)> [Rule 3D .1111] - Total mercury emissions shall not exceed 5.7E-06 pounds per million Btu heat input as determined by U.S. EPA Reference Methods 29, 30A, or 30B (40 CFR 60 - Appendix A, amended November 14, 1990, or the most recent approved version of the method at the time of testing) or ASTM D6784.

This standard shall apply at all times except during periods of startup or shutdown. When compliance is determined by using Method 29, a minimum of 3 dscm per test run must be collected. When compliance is determined by using Methods 30A or 30B, the permittee shall collect a minimum sample as specified in the method. When compliance is determined by using ASTM D6784, a minimum of 3 dscm per test run must be collected.
 4. **Standards for carbon monoxide** <40 CFR 63.7500(a)(1)> [Rule 3D .1111] - Total carbon monoxide emissions shall not exceed 2,800 ppm by volume on a dry basis corrected to 3 percent oxygen based on a 3-run average. Or, as an alternative, the permittee may choose to install and operate a carbon monoxide CEMS whereas the

carbon monoxide emissions shall not exceed 900 ppm by volume on a dry basis corrected to 3 percent oxygen.

These standards shall apply at all times except during periods of startup or shutdown. Each test run for carbon monoxide emissions sampling shall have a minimum of 1 hour sampling time. Compliance with the carbon monoxide emissions when using a CEMS shall be determined based on a 30-day rolling average.

5. **Standards for filterable particulate matter or total selected metals (TSM)** <40 CFR 63.7500(a)(1)> [Rule 3D .1111] - Total filterable particulate matter emissions shall not exceed 0.44 pounds per million Btu heat input. Or, if the permittee elects to demonstrate compliance with the alternative TSM limit, the TSM emissions shall not exceed 4.5E-04 pounds per million Btu heat input.

These standards shall apply at all times except during periods of startup or shutdown. When conducting a stack test to demonstrate compliance with these limits, the permittee shall collect a minimum of 1 dscm per test run.

6. **Stack testing procedures** <40 CFR 63.7515 and 63.7520 and Tables 5 and 7 to the Subpart> [Rule 3D .1111] - For each boiler that is required, or the permittee elects, to demonstrate compliance with any of the applicable emissions limits in permit conditions **3.5(F)(2) through (5)** through performance testing, the initial compliance requirements include the following:
- (a) Each performance test shall be conducted in accordance with the requirements in 40 CFR 63.7(c), (d), (f), and (h) and Table 5 to Subpart DDDDD.
 - (b) The permittee shall develop a site-specific stack test plan according to the requirements in 40 CFR 63.7(c).
 - (c) The permittee shall conduct each performance test under the specific conditions listed in Tables 5 and establish operating limits according to Table 7 to Subpart DDDDD. The performance tests shall be conducted at representative operating load conditions while burning the type of fuel or mixture of fuels that has the highest content of chlorine and mercury, and TSM if you are opting to comply with the TSM alternative standard and you shall demonstrate initial compliance and establish the operating limits based on these performance tests. **These requirements could result in the need to conduct more than one performance test.** Following each performance test and until the next performance test, the permittee shall comply with the operating limit for operating load conditions as specified in Table 4 to Subpart DDDDD.
 - (d) The permittee shall conduct a minimum of three separate test runs for each performance test as specified in 40 CFR 63.7(e)(3). Each test run must comply with the minimum applicable sampling times or volumes specified in Table 2 to Subpart DDDDD.
 - (e) To determine compliance with the emission limits, the permittee shall use the F-Factor methodology and equations in sections 12.2 and 12.3 of EPA Method 19 at 40 CFR Part 60, appendix A-7 to convert the measure particulate matter concentrations, the measured HCL concentrations, the measured mercury concentrations, and the

- measured TSM concentrations that result from the performance test to pounds per million Btu heat input emission rates.
- (f) Except for a 30-day rolling average based on CEMS (or sorbent trap monitoring system) data, if measurement results for any pollutant are reported as below the method detection level (e.g., laboratory analytical results for one or more sample components are below the method defined analytical detection level), the permittee shall use the method detection level as the measured emissions level for that pollutant in calculating compliance. The measured result for a multiple component analysis (e.g., analytical values for multiple Method 29 fractions both for individual HAP metals and for total HAP metals) may include a combination of method detection level data and analytical data reported above the method detection level.
7. **Subsequent stack tests** <40 CFR 63.7515> [Rule 3D .1111] - The permittee shall conduct all applicable performance tests according to permit condition **3.5(F)(6)** above on an annual basis, except as specified below. Annual performance tests must be completed no more than 13 months after the previous performance test, except as specified below:
- (a) If the performance tests for a given pollutant for at least two consecutive years show that the emissions are at or below 75 percent of the emission limit for the pollutant, and if there are no changes in the operation of the individual boiler or air pollution control equipment that could increase emissions, the permittee may choose to conduct performance tests for the pollutant every third year. Each such performance test must be conducted no more than 37 months after the pervious performance test. If you elect to demonstrate compliance using emission averaging in accordance with 40 CFR 63.7522, you must continue to conduct performance tests annually.
- (b) If a performance test shows emissions exceeded the emission limit or 75 percent of the emission limit for a pollutant, the permittee shall conduct annual performance tests for that pollutant until all performance tests over a consecutive 2-year period meet the required level (at or below 75 percent of the emission limit).
8. **Fuel analysis** <40 CFR 63.7510, 63.7515, 63.7521, 63.7530 and Tables 6 and 7 to the Subpart> [Rule 3D .1111] - For each boiler that is required, or the permittee elects, to demonstrate compliance with any of the applicable emissions limits in permit conditions **3.5(F)(2) through (5)** through fuel analysis, the initial compliance requirements include the following:
- (a) Conduct fuel analyses for chlorine and mercury for each type of fuel burned in your boiler according to the procedures outlined in 40 CFR 63.7521(b) through (e) and Table 6 to Subpart DDDDD, as applicable. If the permittee chooses to comply with the alternative TSM emission standard, a fuel analysis for TSM must also be performed using the applicable procedures noted above. The permittee shall establish operating limits according to 40 CFR 63.7530 and Table 7 to the Subpart. A fuel analysis is not required for natural gas.
- (b) The permittee shall develop a site-specific fuel monitoring plan according to the procedures and requirements in 40 CFR 63.7521(b)(1) and (2).
- (c) If the permittee chooses to demonstrate compliance with the mercury, HCL, or TSM

emissions limits based on fuel analysis, a monthly fuel analysis must be conducted according to 40 CFR 63.7521 for each type of fuel burned that is subject to an emission limit in permit conditions **3.5(F)(2), (3), or (5)**. The permittee may comply with this monthly requirement by completing the fuel analysis any time within the calendar month as long as the analysis is separated from the previous analysis by at least 14 calendar days. If a new type of fuel is burned, the permittee must conduct a fuel analysis before burning the new type of fuel in the boiler. The permittee shall still meet all applicable continuous compliance requirements in 40 CFR 63.7540. If each of 12 consecutive monthly fuel analyses demonstrates 75 percent or less of the compliance level, the fuel analysis frequency may be decreased to quarterly for that fuel. If any quarterly sample exceeds 75 percent of the compliance level or if you begin burning a new type of fuel, you must return to monthly monitoring for that fuel, until 12 months of fuel analyses are again less than 75 percent of the compliance level.

- (d) The permittee is not required to conduct fuel analyses for fuels used for only startup, unit shutdown, and transient flame stability purposes. The permittee is required to conduct fuel analyses only for fuels and units that are subject to emission limits for mercury, HCL, or TSM.
9. **Emissions averaging** <40 CFR 63.7522 and 63.7541> [Rule 3D .1111] - As an alternative to meeting the requirements of 40 CFR 63.7500 for Filterable PM (or TSM), HCL, or mercury on a boiler-specific basis, the permittee may demonstrate compliance by emissions averaging, if the averaged emissions are not more than 90 percent of the applicable emission limit according to the procedures in 40 CFR 63.7522. Demonstrating continuous compliance under emission averaging shall be conducted according to 40 CFR 63.7541.
10. **Operating limits and demonstrating continuous compliance** <40 CFR 63.7520, 63.7525, and Tables 7 and 8 to Subpart DDDDDD> [Rule 3D .1111] - The permittee shall comply with the following operating limits to demonstrate continuous compliance with the Boiler MACT:

Establishing operating limits:

- (a) For carbon monoxide, the permittee shall collect oxygen data every 15 minutes from the oxygen trim system during the entire period of the stack test. The hourly average oxygen concentration shall be determined by computing the hourly averages using all of the 15-minute readings taken during the stack test. The permittee shall determine the lowest hourly average oxygen concentration established during the stack test as the minimum operating limit.
- (b) For particulate matter, the permittee shall use opacity as a surrogate parameter. The opacity shall be maintained to less than or equal to 10 percent opacity based on a daily block average.
- (c) For any pollutant for which compliance is demonstrated by a performance test, the permittee shall establish a unit specific limit for the maximum operating load in accordance with permit condition **3.5(F)(6)(c)** above. The permittee shall collect operating load or steam generation data every 15 minutes during the entire period of the performance test. The average operating load shall be determined by computing

the hourly averages using all of the 15-minute readings taken during the stack test. The permittee shall determine the average of the three tests run averages during the stack test, and multiply this by 1.1 (110 percent) as the operating limit.

Demonstrating continuous compliance:

- (d) For carbon monoxide, the permittee shall set the oxygen trim system to the minimum oxygen level determined during the stack test.
- (e) For particulate matter, the permittee shall install, operate, certify, maintain, and collect the opacity system monitoring data according to 40 CFR 63.7525(c) and 63.7535 and reduce the data to 6-minute averages. The permittee shall maintain the opacity to less than or equal to 10 percent based on a daily block average.
- (f) For boiler load, the permittee shall collect the operating load data or steam generation every 15 minutes. The permittee shall maintain the operating load such that it does not exceed 110 percent of the highest hourly average operating load recorded during the most recent performance test based on a 30-day rolling average.

11. Work practice standards (Boiler tune-up) <40 CFR 63.7515 and 63.7540(a)(10)>

[Rule 3D .1111] - The permittee shall conduct an initial tune-up of the boiler **no later than January 31, 2016**. Subsequent to the initial tune-up, the permittee shall conduct a tune-up of the boiler every five years to demonstrate continuous compliance. The permittee may delay the burner inspection specified in permit condition **(11)(a)** below, until the next scheduled or unscheduled unit shutdown, but the permittee must inspect the burner at least once every 72 months. The five year tune-up shall be performed no more than 61 months after the previous tune-up and be performed as specified below:

- (a) As applicable, inspect the burner, and clean or replace any components of the burner as necessary (you may delay the burner inspection until the next scheduled unit shutdown). At units where entry into a piece of process equipment or into a storage vessel is required to complete the tune-up inspections, inspections are required only during planned entries into the storage vessel or process equipment;
- (b) Inspect the flame pattern, as applicable, and adjust the burner as necessary to optimize the flame pattern. The adjustment should be consistent with the manufacturer's specifications, if available;
- (c) Inspect the system controlling the air-to-fuel ratio, as applicable, and ensure that it is correctly calibrated and functioning properly (you may delay the inspection until the next scheduled unit shutdown);
- (d) Optimize total emissions of CO. This optimization should be consistent with the manufacturer's specifications, if available, and with any NO_x requirement to which the unit is subject;
- (e) Measure the concentrations in the effluent stream of CO in parts per million, by volume, and oxygen in volume percent, before and after the adjustments are made (measurements may be either on a dry or wet basis, as long as it is the same basis before and after the adjustments are made). Measurements may be taken using a portable CO analyzer; and
- (f) Maintain on-site and submit, if requested by this Office, an annual report containing the information below:
 - (i) The concentrations of CO in the effluent stream in parts per million by volume,

and oxygen in volume percent, measured at high fire or typical operating load, before and after the tune-up of the boiler or process heater;

- (ii) A description of any corrective actions taken as a part of the tune-up; and
- (iii) The type and amount of fuel used over the 12 months prior to the tune-up, but only if the unit was physically and legally capable of using more than one type of fuel during that period. Units sharing a fuel meter may estimate the fuel used by each unit.

12. Work practice standards (Energy Assessment) <Item 4 of Table 3 to Subpart DDDDD> [Rule 3D .1111] - The permittee must have a one-time energy assessment performed by a qualified energy assessor **no later than January 31, 2016**. An energy assessment completed on or after January 1, 2008, that meets or is amended to meet the energy assessment requirements in the permit condition, satisfies the energy assessment requirement. A facility that operates under an energy management program compatible with ISO 50001 that includes the affected units also satisfies the energy assessment requirement. The energy assessment must include the following with extent of the evaluation for items (a) to (e) appropriate for the on-site technical hours listed in 40 CFR 63.7575:

- (a) A visual inspection of the boiler or process heater system;
- (b) An evaluation of operating characteristics of the boiler or process heater systems, specifications of energy using systems, operating and maintenance procedures, and unusual operating constraints;
- (c) An inventory of major energy use systems consuming energy from affected boilers and process heaters and which are under the control of the boiler/process heater owner/operator;
- (d) A review of available architectural and engineering plans, facility operation and maintenance procedures and logs, and fuel usage;
- (e) A review of the facility's energy management practices and provide recommendations for improvements consistent with the definition of energy management practices, if identified;
- (f) A list of cost-effective energy conservation measures that are within the facility's control;
- (g) A list of the energy savings potential of the energy conservation measures identified; and
- (h) A comprehensive report detailing the ways to improve efficiency, the cost of specific improvements, benefits, and the time frame for recouping those investments.

13. Work practice standards (Startup and Shutdown Procedures) <Items 5 and 6 of Table 3 to Subpart DDDDD> [Rule 3D .1111]

- (a) *Startup*: The permittee must operate all CMS during startup. For startup of a boiler, the permittee must use one or a combination of the following clean fuels: natural gas, synthetic natural gas, propane, distillate oil, syngas, ultra-low sulfur diesel, fuel oil-soaked rags, kerosene, hydrogen, paper, cardboard, refinery gas, and liquefied petroleum gas.

If the boiler is started by firing coal/solid fossil fuel, biomass/bio-based solids, heavy liquid fuel, or gas 2 (other) gases, the permittee must vent emissions to the main stack(s) and engage all of the applicable control devices. Startup ends when steam or heat is supplied for any purpose.

The permittee shall comply with all applicable emission limits at all times except for startup or shutdown periods conforming to this work practice. Monitoring data must be collected during periods of startup, as specified in 40 CFR 63.7535(b). Records must also be kept during periods of startup. Reports concerning activities and periods of startup shall be submitted as specified in permit **3.5(F)(15)**.

- (b) *Shutdown*: The permittee must operate all CMS during shutdown. While firing coal/solid fossil fuel, biomass/bio-based solids, heavy liquid fuel, or gas 2 (other) gases during shutdown, the permittee must vent emissions to the main stack(s) and engage all of the applicable control devices.

The permittee shall comply with all applicable emission limits at all times except for startup or shutdown periods conforming to this work practice. Monitoring data must be collected during periods of shutdown, as specified in 40 CFR 63.7535(b). Records must also be kept during periods of shutdown. Reports concerning activities and periods of shutdown shall be submitted as specified in permit **3.5(F)(15)**.

14. Recordkeeping requirements <40 CFR 63.7555> [Rule 3D .1111 and 3Q .0508(f)] - The permittee shall keep all applicable records required in accordance with 40 CFR 63.7555 including, but not limited to, the following:

- (a) A copy of each notification and report that you submitted to demonstrate compliance, including all documentation supporting any notification or semiannual report;
- (b) Records of all performance tests, fuel analyses, or other compliance demonstrations and performance evaluations;
- (c) For each CEMS, COMS, and continuous monitoring system, records as stated in 40 CFR 63.7555(b);
- (d) Records of all monitoring data and calculated averages for applicable operating limits to show continuous compliance with each emission limit and operating limit that applies;
- (e) Records of monthly fuel use, including the type(s) of fuel and amount(s) used;
- (f) Copy of all calculations and supporting documentation of maximum chlorine, mercury, and/or TSM fuel input that were done to demonstrate compliance with the respective emission limits through performance testing;
- (g) Copy of all calculations and supporting documentation of HCL, mercury, and/or TSM emission rates that were done to demonstrate compliance with the respective emission limits through fuel analysis. The permittee may use the results from one fuel analysis for multiple boilers provided they are all burning the same fuel type. However, you must calculate chlorine fuel input, or HCL emission rate, for each boiler;
- (h) Records that document that the emissions in previous stack test(s) were less than 75 percent of the applicable emission limit, and document that there was no change in

source operations, including fuel composition and operation of air pollution control equipment, that would cause emissions of the relevant pollutant to increase within the past year;

- (i) Records of the occurrence and duration of each malfunction of the boiler, or of the associated air pollution control and monitoring equipment;
- (j) Records of actions taken during periods of malfunction to minimize emissions including corrective actions to restore the malfunctioning boiler, air pollution control, or monitoring equipment to its normal or usual manner of operation;
- (k) Records of the calendar date, time, occurrence and duration of each startup and shutdown; and
- (l) Records of the type(s) and amount(s) of fuels used during each startup and shutdown.

Records shall be in a form suitable and readily available for expeditious review. Each record shall be kept for 5 years following the date of each occurrence, measurement, maintenance, corrective action, report, or record. Each record shall be kept on site, or they must be accessible from on site, for at least 2 years after the date of each occurrence, measurement, maintenance, corrective action, report, or record.

15. **Reporting requirements** <40 CFR 63.7550> [Rule 3D .1111 and 3Q .0508(f)] - The facility shall submit a semi-annual report to this Office postmarked or received no later than January 31st for the period July through December and no later than July 31st for the period January through June. The first report is to be postmarked or received by this Office no later than July 31, 2016. The reports shall contain the following information:

- (a) Company and Facility name and address;
- (b) Process unit information, emissions limitations, and operating parameter limitations;
- (c) Date of report and beginning and ending dates of the reporting period;
- (d) The total operating time during the reporting period;
- (e) The total fuel use by each individual boiler within the reporting period, including, but not limited to, a description of the fuel, whether the fuel has received a non-waste determination by the EPA or your basis for concluding the fuel is not a waste, and the total fuel usage amounts with units of measure;
- (f) If the applicant is conducting performance tests once every three years, the date of the last two performance tests and a statement as to whether there have been any operational changes since the last performance test that could increase emissions;
- (g) If the applicant wishes to burn a new type of fuel and cannot demonstrate compliance with the maximum chlorine input operating limit using Equation 7 of 40 CFR 63.7530, or the maximum mercury input operating limit using Equation 8 of 40 CFR 63.7530, or the maximum TSM input operating limit using Equation 9 of 40 CFR 63.7530, the applicant shall include in the compliance report a statement indicating the intent to conduct a new performance test within 60 days of starting to burn the new fuel;
- (h) If there are no deviations from any emission limits or operating limits, a statement that there were no deviations from the emission limits or operating limits during the reporting period;
- (i) If a malfunction occurred during the reporting period, the report shall include the number, duration, and a brief description for each type of malfunction which occurred

- during the reporting period and which caused or may have caused any applicable emission limitation to be exceeded. The report shall also include a description of actions taken by the permittee during a malfunction of a boiler or associated air pollution control device or CMS to minimize emissions in accordance with 40 CFR 63.7500(a)(3), including actions taken to correct the malfunction;
- (j) If the permittee plans to demonstrate compliance by emission averaging, certify the emission level achieved or the control technology employed is no less stringent than the level or control technology contained in the notification of compliance status;
 - (k) For each reporting period, the compliance reports must include all of the calculated 30-day rolling average values based on the daily CEMS (CO and mercury) and CPMS (PM CPMS output, scrubber pH, scrubber liquid flow rate, scrubber pressure drop) data;
 - (l) A statement by a responsible official with that official's name, title, and signature, certifying the truth, accuracy, and completeness of the content of the report.
 - (m) For each deviation from an emission limit or operating limit that occurs at an individual boiler where you are not using a CMS to comply with that emission limit or operating limit, the report shall additionally contain:
 - (i) a description of the deviation and which emission limit or operating limit from which you deviated;
 - (ii) Information on the number, duration, and cause (including unknown cause), as applicable, and the corrective action taken; and
 - (iii) If the deviation occurred during an annual performance test, provide the date the annual performance test was completed.
 - (n) For each deviation from an emission limit, operating limit, and monitoring requirement occurring at an individual boiler where you are using a CMS to comply with that emission limit or operating limit, the report shall additionally contain the following information. This includes any deviations from the site-specific plan as required in 40 CFR 63.7505(d).
 - (i) The date and time that each deviation started and stopped and a description of the nature of the deviation (i.e. what you deviated from);
 - (ii) The date and time that each CMS was inoperative, except for zero (low-level) and high-level checks;
 - (iii) The date, time, and duration that each CMS was out of control, including the information in 40 CFR 63.8(c)(8);
 - (iv) The date and time that each deviation started and stopped;
 - (v) A summary of the total duration of the deviation during the reporting period and the total duration as a percent of the total source operating time during the reporting period;
 - (vi) A characterization of the total duration of the deviations during the reporting period into those that are due to control equipment problems, process problems, other known causes, and other unknown causes;
 - (vii) A Summary of the total duration of CMS's downtime during the reporting period and the total duration of CMS downtime as a percent of the total source operating time during the reporting period;
 - (viii) A brief description of the source for which there was a deviation; and
 - (ix) A description of any changes in CMS's, processes, or controls since the last reporting period for the source for which there was a deviation.

In addition to submitting the compliance report to this Office, the permittee shall submit the compliance report electronically using CEDRI that is accessed through the EPA's Central Data Exchange (CDX) (www.epa.gov/cdx).

16. **Notification requirements** <40 CFR 63.7545> [Rule 3D .1111] - The permittee shall submit to this Office all of the notifications in 40 CFR 63.7(b) and (c), 63.8(e), (f)(4) and (6), and 63.9(b) through (h) that are applicable to your facility. In addition, the permittee shall submit the following notifications:
- (a) A Notification of Intent to conduct a performance test at least 60 days before the performance test is scheduled to begin;
 - (b) A Notification of Compliance Status according to 40 CFR 63.9(h)(2)(ii). For the initial compliance demonstration for each boiler, the permittee shall submit the Notification of Compliance Status, including all performance test results and fuel analyses, before the close of business on the 60th day following the completion of all performance test and/or other initial compliance demonstrations for all boilers at the facility according to 63.10(d)(2). The Notification of Compliance Status report must contain all of the following information:
 - (i) A description of the affected boilers, including identification of which subcategories the unit is in, the design heat capacity of the unit, a description of the add-on controls used on the unit to comply with Subpart DDDDD, description of the fuel(s) burned, and justification for the selection of fuel(s) burned during the compliance demonstrations;
 - (ii) Summary of the results of all performance tests and fuel analyses, and calculations conducted to demonstrate initial compliance including all established operating limits, including:
 - (A) Identification of whether you are complying with the PM emission limit or the alternative TSM emission limit; and
 - (B) Identification of whether you are complying with the output-based emission limits or the heat input-based (i.e., lb/MMBtu or ppm) emission limits.
 - (iii) A summary of the maximum CO emission levels recorded during the performance test to show that you have met any applicable emission standard in Table 2 to Subpart DDDDD, if you are not using a CO CEMS to demonstrate compliance;
 - (iv) Identification of whether you plan to demonstrate compliance with each applicable emission limit through performance testing, a CEMS, or fuel analysis;
 - (v) Identification of whether you plan to demonstrate compliance by emissions averaging and identification of whether you plan to demonstrate compliance by using efficiency credits through energy conservation:
 - (A) If you plan to demonstrate compliance by emission averaging, report the emission level that was being achieved or the control technology employed on January 31, 2013.
 - (vi) A signed certification that you have met all applicable emission limits and work practice standards;
 - (vii) If you had a deviation from any emission limit, work practice standard, or operating limit, the permittee shall also submit a description of the deviation, the duration of the deviation, and the corrective action taken in the Notification of

- Compliance Status report; and
- (viii) A certification of compliance, as applicable, and signed by a responsible official stating:
 - (A) "This facility complies with the required initial tune-up according to the procedures in 40 CFR 63.7540(a)(10)(i) through (vi)."
 - (B) "This facility has had an energy assessment performed according to 40 CFR 63.7530(e)."
 - (C) Except for units that burn only natural gas, refinery gas, or other gas 1 fuel, or units that qualify for a statutory exemption as provided in section 129(g)(1) of the Clean Air Act, include the following: "No secondary material that are solid waste were combusted in any affected unit."

G. Monitoring requirement for moisture content of biomass fuel [Rule 3Q .0508(f)(1)]

1. **Testing** - The permittee shall sample the biomass fuel on a quarterly basis to determine the moisture content of the fuel. The sampling shall be conducted according to the requirements detailed in 40 CFR 63.7521 and Table 6 to Subpart DDDDD.
2. **Recordkeeping requirements** - For each quarterly sample, the permittee shall record the following:
 - (i) The date and time of the sampling;
 - (ii) The date the analysis was performed;
 - (iii) The name of the company or entity that performed the analysis;
 - (iv) The analytical techniques of method used to collect and analyze the sample;
 - (v) The result of the analysis; and
 - (vi) The moisture content based on an as-fired annual heat input basis.
3. **Notification requirement** - The permittee shall notify this Office if the results of the fuel moisture content analysis performed pursuant to condition 3.5(G)(1) are less than 40% based on an as-fired annual heat input basis. Moisture content of less than 40% for the biomass fuel is considered a fuel switch as detailed in 40 CFR 63.7545(h) and subject to the applicable emissions specified in 40 CFR 63.7500. The permittee shall notify this Office within 30 days of the switch and provide the following information:
 - (i) The name of the owner/operator of the affected source, the location of the affected source, the boiler(s) that have switched fuels, and the date of the notice;
 - (ii) The current applicable boiler subcategory under Subpart DDDDD; and
 - (iii) The date upon which the fuel switch occurred.
4. **Reporting requirement** - The permittee shall submit the moisture content sampling results as described in condition 3.5(G)(2) to this Office by January 30th for the period July through December, and by July 30th for the period January through June.

3.6 ES-62F Steam and Control Systems, Inc. (SCS) Hybrid Suspension Grate designed to burn wet biomass/bio-based solid Gasified-wood Boiler, controlled by Multicyclone 62F1 and ESP 62F2

The following provides a summary of the limits and/or standards for the emission source(s) described above.

Regulated Pollutant	Applicable Standard	Applicable Regulation
Particulate Matter	0.03 lb/MMBtu	40 CFR 51.166 and 3D .0530
Nitrogen Oxides	0.30 lb NO _x /MMBtu	40 CFR 51.166 and 3D .0530
Sulfur Dioxide	2.3 lb SO ₂ /MMBtu	3D .0516
Carbon Monoxide	0.3 lb CO/MMBtu	40 CFR 51.166 and 3D .0530
HCL	0.022 lb/MMBtu	40 CFR 63.7500(a)(1), Table 2, and 3D .1111
Mercury	5.7E-06 lb/MMBtu	40 CFR 63.7500(a)(1), Table 2, and 3D .1111
Carbon Monoxide (or demonstrate compliance with a continuous emissions monitor (CEM))	2,800 ppm by volume on a dry basis corrected to 3 percent oxygen, 3-run average; (or 900 ppm by volume on a dry basis corrected to 3 percent oxygen, 30-day rolling average)	40 CFR 63.7500(a)(1), Table 2, and 3D .1111
Filterable Particulate Matter (or Total Selected Metals (TSM))	0.44 lb/MMBtu (or 4.5E-04 lb/MMBtu)	40 CFR 63.7500(a)(1), Table 2, and 3D .1111
N/A	Natural gas usage shall be limited to an annual capacity factor of 10 percent or less	40 CFR 60.44b(k) and 3D .0524
Visible Emissions	20 percent opacity	40 CFR 60.43b(f) and 3D .0524
Visible Emissions	10 percent opacity (daily block average)	40 CFR 63.7525(c), Table 8, and 3D .1111

A. Prevention of Significant Deterioration [Rule 3D .0530]

1. **Standard for Particulate Matter [Rule 3D .0530]** - Total particulate matter emissions shall not exceed 0.03 pounds per million Btu heat input as determined by U.S. EPA Reference Method 5 (40 CFR 60 - Appendix A, amended October 17, 2000, or the most recent approved version of the method at the time of testing). This limit shall be met with the use of a multicyclone followed by an electrostatic precipitator as Best Available Control Technology.

This standard shall apply at all times except during periods of startup, shutdown or malfunction.

2. **Testing [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)]** - The permittee shall follow the testing requirements specified in condition **3.1(C)(2)**.
3. **Periodic monitoring and recordkeeping requirements [Rules 3D .0524 and 3Q .0508(f)]** - The permittee shall monitor opacity as a surrogate to ensure the proper operation of the multicyclone and electrostatic precipitator. The permittee shall install, calibrate, maintain, and operate a continuous opacity monitor (COM) and record the output of the system in accordance with NSPS Subpart Db, 40 CFR 60.48b(a). The procedures under 40 CFR 60.13 shall be followed for installation, evaluation, and operation of the COM used to measure the opacity of emissions discharged to the atmosphere pursuant to NSPS Subpart Db, 40 CFR 60.48b(e) and Rule 3D .0524.
4. **Reporting requirement [Rules 3D .0524 and 3Q .0508(f)(1)]** - The permittee shall comply with all applicable recordkeeping and reporting requirements specified in 40 CFR 60.49b, including, but not limited to, the requirement to submit excess emissions reports for any excess emissions of opacity which occur during the six-month period. These reports shall be submitted no later than January 30th for the period July through December and no later than July 30th for the period January through June. If there are no excess emissions during the semiannual period, the permittee shall submit a report stating that no excess emissions occurred during the reporting period.
5. **Compliance Assurance Monitoring and Recordkeeping requirements for particulate matter <40 CFR Part 64> [Rules 3D .0614 and 3Q .0508(f)]** - In order to demonstrate compliance with the CAM plan for the multicyclone and electrostatic precipitator, the following monitoring and recordkeeping requirements apply:
 - (a) The permittee shall monitor opacity as a surrogate to ensure the proper operation of the multicyclone and electrostatic precipitator using the COM required in permit condition **3.6(A)(3)**.
 - (b) The outlet opacity shall be continuously monitored to provide data for at least 90% of the operating hours in each steam generating unit day, in at least 27 out of 30 successive steam generating unit days.
 - (c) The outlet opacity readings are recorded at least four times equally spaced over an hour for at least 90% of the operating hours.
 - (d) The averaging period for the opacity readings shall be six minutes.

- (e) The permittee shall provide initial calibration of the COM in accordance with manufacturer's recommendation at startup. In addition, quarterly calibration of the COM shall be performed in accordance with manufacturer's recommended procedure. Preventative maintenance of the COM shall be performed on an annual basis.

An excursion is defined as data monitored greater than 12 percent opacity for more than three consecutive hours during an operation day, except for startup and shutdown. An excursion will trigger an investigation into its cause and the appropriate corrective action will be performed and documented.

6. **Reporting Requirement** <40 CFR 64.9> [Rules 3D .0614 and 3Q .0508(f)(1)] - The permittee shall submit the following report:
- (a) A summary report of the compliance assurance monitoring required in permit condition **3.6(A)(5)** including, as a minimum:
- (i) Summary information on the number, duration and cause (including unknown cause, if applicable) of excursions or exceedances, as applicable, and the corrective actions taken;
 - (ii) Summary information on the number, duration and cause (including unknown cause, if applicable) for monitor downtime incidents (other than downtime associated with calibration checks, if applicable); and
 - (iii) A description of the actions taken to implement a QIP (if required by this Office) during the reporting period as specified in 40 CFR 64.8. Upon completion of a QIP, the owner or operator shall include in the next summary report documentation that the implementation of the plan has been completed and reduced the likelihood of similar levels of excursions or exceedances occurring.

This report shall be received by this Office by January 30th for the period July through December and by July 30th for the period January through June.

B. Prevention of Significant Deterioration [Rule 3D .0530]

1. **Standard for Nitrogen Oxides** [Rule 3D .0530] - Total nitrogen oxides emissions shall not exceed 0.30 pounds per million Btu heat input as determined by U.S. EPA Reference Method 7 (40 CFR 60 - Appendix A, amended November 14, 1990, or the most recent approved version of the method at the time of testing). This limit shall be met by the proper operation of the boiler design of low excess air and staged combustion as Best Available Control Technology. Compliance with this limit shall be demonstrated by the installation, operation and maintenance of a continuous emissions monitor (CEM).

This standard shall apply at all times including periods of startup, shutdown, or malfunction. Compliance with this emission limit is determined on a 30-day rolling average basis.

2. **Testing** [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)] - The permittee shall follow the testing requirements specified in condition **3.1(C)(2)**.

3. Monitoring requirements [Rules 3D .0530 and 3Q .0508(f)] -

- (a) The permittee shall install, calibrate, maintain, and operate a continuous monitoring system for measuring nitrogen oxides emissions discharged to the atmosphere and record the output of the system. The continuous monitoring system for nitrogen oxides shall be operated and data recorded during all periods of operation, except for continuous monitoring system breakdowns and repairs.
- (b) When nitrogen oxides emission data are not obtained because of continuous monitoring system breakdowns, repairs, calibration checks and zero and span adjustments, emission data will be obtained by using standby monitoring systems, Method 7, Method 7A, or other approved reference methods to provide emission data for a minimum of 75 percent of the operating hours in each steam generating unit day, in at least 22 out of 30 successive steam generating unit days.

4. Recordkeeping and reporting requirements [Rules 3D .0530 and 3Q .0508(f)] -

- (a) The permittee shall submit written excess emissions reports based on the data recorded by the CEM for nitrogen oxides. This report shall be submitted no later than January 30th for the period July through December and no later than July 30th for the period January through June.
- (b) The CEM must be maintained, calibrated, operated and audited in accordance with 40 CFR 60, Appendix F quality assurance procedures. A data assessment report (DAR) which includes as a minimum the results of CEM accuracy assessments and all corrective actions taken when the CEM was determined to be out of control shall be filed with this Office. This report shall be submitted with the excess emissions report no later than January 30th for the period July through December and no later than July 30th for the period January through June.

C. Sulfur Dioxide Emissions from Combustion Sources [Rule 3D .0516]

- 1. **Standard** [Rule 3D .0516] - Emissions of sulfur dioxide from the SCS Boiler shall not exceed 2.3 pounds per million Btu heat input. Sulfur dioxide formed by the combustion of sulfur in fuels, wastes, ores, and other substances shall be included when determining compliance with this standard.
- 2. **Testing** [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)] - The permittee shall follow the testing requirements specified in condition 3.1(C)(2).
- 3. **Monitoring, recordkeeping, and reporting requirements** - No monitoring, recordkeeping, or reporting is required for sulfur dioxide emissions from the combustion of wood, natural gas, corn cleanings, corn germ, and dry and wet feed for this source. However, the permittee shall maintain the appropriate records for raw material usage and/or production rates in order to calculate the emissions data needed to fulfill the requirements for condition 2.13 entitled *Annual Emission Inventory Requirements*.

D. Prevention of Significant Deterioration [Rule 3D .0530]

1. **Standard for Carbon Monoxide** [Rule 3D .0530] - Total carbon monoxide emissions shall not exceed 0.3 pounds per million Btu heat input as determined by U.S. EPA Reference Method 10 (40 CFR 60 - Appendix A, amended November 14, 1990, or the most recent approved version of the method at the time of testing). This limit shall be met by the boiler design of low excess air and staged combustion and good operating combustion practices as Best Available Control Technology.
2. **Testing** [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)] - The permittee shall demonstrate compliance with the carbon monoxide emission limit by conducting an annual performance test. The permittee shall follow the testing requirements specified in conditions 2.22, 2.23, and 3.1(C)(2).
3. **Monitoring, recordkeeping, and reporting requirements** - No monitoring, recordkeeping, or reporting is required for carbon monoxide emissions from the combustion of wood, natural gas, corn cleanings, corn germ, and dry and wet feed for this source. However, the permittee shall maintain the appropriate records for raw material usage and/or production rates in order to calculate the emissions data needed to fulfill the requirements for condition 2.13 entitled *Annual Emission Inventory Requirements*.

E. New Source Performance Standards (NSPS) Subpart Db Conditions [Rule 3D .0524]

1. **Standard** <40 CFR 60.49b(d)> [Rule 3D .0524] - Natural gas usage shall be limited to an annual capacity factor of 10% or less in order to avoid the nitrogen oxides standard in Subpart Db in accordance with 40 CFR 60.44b(k).
2. **Monitoring and recordkeeping requirements** <40 CFR 60.49b(d)> [Rules 3D .0524 and 3Q .0508(f)] - The permittee shall record and maintain records of each fuel combusted during each day and calculate the annual capacity factor for natural gas on a semiannual basis. The annual capacity factor is determined on a 12-month rolling average basis with a new annual capacity factor calculated at the end of each calendar month. The annual capacity factor is the ratio between the actual heat input to the boiler from natural gas during a calendar year and the potential heat input to the boiler had it been operated for 8,760 hours during a calendar year at the maximum steady state design heat input capacity.
3. **Reporting requirement** [Rules 3D .0524 and 3Q .0508(f)(1)] - The permittee shall submit records of the annual capacity factor for natural gas, based on a 12-month rolling average by January 30th for the period July through December, and by July 30th for the period January through June.

F. Control of Visible Emissions [Rule 3D .0524] -

1. **Standard** [Rule 3D .0524] - Visible emissions shall not exceed 20% opacity (six-minute average), except for one six-minute period per hour of not more than 27% opacity, in accordance with 40 CFR 60.43b(f). The opacity standard applies at all times, except during periods of startup, shutdown or malfunction.
2. **Testing** [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)] - The permittee shall follow the testing requirements specified in condition 3.1(C)(2).
3. **Monitoring and recordkeeping requirements** [Rules 3D .0524 and 3Q .0508(f)] - The permittee shall follow the monitoring and recordkeeping requirements specified in condition 3.6(A)(2).
4. **Reporting requirement** [Rules 3D .0524 and 3Q .0508(f)(1)] - The permittee shall follow the reporting requirements specified in permit condition 3.6(A)(3).

G. National Emission Standards for Hazardous Air Pollutants for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters [Rule 3D .1111 and 40 CFR 63 Subpart DDDDD] - The permittee shall demonstrate compliance with the NESHAP, Subpart DDDDD for the boiler (ES-62F), by complying with all of the requirements under permit condition 3.5(F) above as applicable.

H. Monitoring requirement for moisture content of biomass fuel [Rule 3Q .0508(f)(1)] - The permittee shall comply with the testing, recordkeeping and reporting requirements under permit condition 3.5(G) above.

3.7 ES-62 Deltak Boiler, Uncontrolled

The following provides a summary of the limits and/or standards for the emission source(s) described above.

Regulated Pollutant	Applicable Standard	ES-#	Applicable Regulation
Particulate Matter	0.33 lb PM/MMBtu	ES-62	3D .0503
Sulfur Dioxide*	2.3 lb SO ₂ /MMBtu		3D .0516
Sulfur Dioxide	14.46 lb SO ₂ /hr	ES-62 ^{AOS}	40 CFR 51.166 and 3D .0530
Sulfur Dioxide	The daily grind rate shall be limited to 60,000 bushels of corn per day based on a three day average throughput during the alternative operating scenario		
Visible Emissions	20 percent opacity	ES-62	3D .0521(d) - see condition 3.1(C) for requirements

*3D .0516 - *Sulfur Dioxide Emissions from Combustion Sources* applies to the boilers associated with these emission units. Use of only natural gas assures compliance with this standard. No monitoring, recordkeeping, or reporting is required to assure compliance. However, the permittee shall maintain the appropriate records for raw material usage and/or production rates in order to calculate the emissions data needed for condition 2.13 entitled, *Annual Emission Inventory Requirements*.
AOS = Alternate Operating Scenario

A. Particulates from Fuel Burning Indirect Heat Exchangers [Rule 3D .0503]

1. **Standard/Operation requirements** [Rule 3D .0503] -
 - (a) **Emission limit for ES-62** - Particulate matter emissions shall not exceed 0.33 lb/MMBtu based on maximum heat input.
2. **Testing** [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)] - The permittee shall follow the testing requirements specified in condition 3.1(C)(2).
3. **Monitoring, recordkeeping, and reporting** - No monitoring, recordkeeping, or reporting is required for particulate matter emissions from the combustion of natural gas for these sources. However, the permittee shall maintain the appropriate records for raw material usage and/or production rates in order to calculate the emissions data needed to fulfill the requirements for condition 2.13 entitled *Annual Emission Inventory Requirements*.

- B. **Prevention of Significant Deterioration** [Rule 3D .0530] - This rule applies to ES-62 during the **alternative operating scenario (AOS)** when both ES-62C and ES-62F are

shutdown due to maintenance. The AOS shall occur only during March 1 to May 30 and/or September 1 to November 30. Process exhaust air containing SO₂ normally routed to ES-62C or ES-62F shall be rerouted to the Deltak boiler at all times during the AOS period.

1. **Standard/Operation requirements for ES-62 [Rule 3D .0530] -**

- (a) Total sulfur dioxide emissions shall not exceed 14.46 pounds per hour during the AOS.
- (b) The daily grind rate shall be limited to 60,000 bushels of corn per day based on a three day average throughput during the AOS.

2. **Testing [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)] -** The permittee shall follow the testing requirements specified in condition **3.1(C)(2)**.

3. **Monitoring, recordkeeping, and reporting requirements -** The permittee shall follow the monitoring, recordkeeping, and reporting requirements specified in conditions **3.1(B)(1) through (3)**.

C. National Emission Standards for Hazardous Air Pollutants for Major Sources: Industrial, Commercial, and Institutional Boilers and Process Heaters [Rule 3D .1111 and 40 CFR 63 Subpart DDDDD]

1. **Compliance date <40 CFR 63.7495> [Rule 3D .1111]**

The permittee must comply with this subpart no later than January 31, 2016.

2. **Work practice standards (Boiler tune-up) <40 CFR 63.7515 and 63.7540(a)(10)> [Rule 3D .1111]**

The permittee must conduct an initial tune-up of the boiler no later than January 31, 2016. Subsequent to the initial tune-up, the permittee must conduct an annual tune-up to demonstrate continuous compliance. The annual tune-up must be performed no more than 13 months after the previous tune-up and be performed as specified below:

- (a) As applicable, inspect the burner, and clean or replace any components of the burner as necessary (you may delay the burner inspection until the next scheduled unit shutdown). At units where entry into a piece of process equipment or into a storage vessel is required to complete the tune-up inspections, inspections are required only during planned entries into the storage vessel or process equipment;
- (b) Inspect the flame pattern, as applicable, and adjust the burner as necessary to optimize the flame pattern. The adjustment should be consistent with the manufacturer's specifications, if available;
- (c) Inspect the system controlling the air-to-fuel ratio, as applicable, and ensure that it is correctly calibrated and functioning properly (you may delay the inspection until the next scheduled unit shutdown);
- (d) Optimize total emissions of CO. This optimization should be consistent with the manufacturer's specifications, if available, and with any NO_x requirement to which the unit is subject;

- (e) Measure the concentrations in the effluent stream of CO in parts per million, by volume, and oxygen in volume percent, before and after the adjustments are made (measurements may be either on a dry or wet basis, as long as it is the same basis before and after the adjustments are made). Measurements may be taken using a portable CO analyzer; and
 - (f) Maintain on-site and submit, if requested by this Office, an annual report containing the information below:
 - (i) The concentrations of CO in the effluent stream in parts per million by volume, and oxygen in volume percent, measured at high fire or typical operating load, before and after the tune-up of the boiler or process heater;
 - (ii) A description of any corrective actions taken as a part of the tune-up; and
 - (iii) The type and amount of fuel used over the 12 months prior to the tune-up, but only if the unit was physically and legally capable of using more than one type of fuel during that period. Units sharing a fuel meter may estimate the fuel used by each unit.
3. **Work practice standards (Energy Assessment)** <Item 4 of Table 3 to Subpart DDDDD of Part 63> [Rule 3D .1111] - The permittee must have a one-time energy assessment performed by a qualified energy assessor no later than January 31, 2016. An energy assessment completed on or after January 1, 2008, that meets or is amended to meet the energy assessment requirements in the permit condition, satisfies the energy assessment requirement. A facility that operates under an energy management program compatible with ISO 50001 that includes the affected units also satisfies the energy assessment requirement. The energy assessment must include the following with extent of the evaluation for items (a) to (e) appropriate for the on-site technical hours listed in 40 CFR 63.7575:
- (a) A visual inspection of the boiler or process heater system;
 - (b) An evaluation of operating characteristics of the boiler or process heater systems, specifications of energy using systems, operating and maintenance procedures, and unusual operating constraints;
 - (c) An inventory of major energy use systems consuming energy from affected boilers and process heaters and which are under the control of the boiler/process heater owner/operator;
 - (d) A review of available architectural and engineering plans, facility operation and maintenance procedures and logs, and fuel usage;
 - (e) A review of the facility's energy management practices and provide recommendations for improvements consistent with the definition of energy management practices, if identified;
 - (f) A list of cost-effective energy conservation measures that are within the facility's control;
 - (g) A list of the energy savings potential of the energy conservation measures identified; and
 - (h) A comprehensive report detailing the ways to improve efficiency, the cost of specific improvements, benefits, and the time frame for recouping those investments.

4. **Notification of compliance status** <40 CFR 63.9(h)(2)(ii), 63.7530(d), (e), and (f), and 63.7545(e)> [Rule 3D .1111]
The permittee shall send an initial Notification of Compliance Status to this Office before the close of business on the 60th day following the completion of the initial tune-up of the boiler and the one-time energy assessment. The notification shall include the following information:
- (a) A signed certification that you have met all applicable work practice standards;
 - (b) A certification of compliance signed by the responsible official stating; "This facility complies with the required initial tune-up according to the procedures in 40 CFR 63.7540(a)(10)(i) through (vi)";
 - (c) A certification of compliance signed by the responsible official stating; "This facility has had an energy assessment performed according to 40 CFR 63.7530(e)" and is an accurate depiction of the facility at the time of the assessment; and
 - (d) If you had a deviation from any work practice standard, you must also submit a description of the deviation, the duration of the deviation, and the corrective action taken.
5. **Recordkeeping requirements** <40 CFR 63.7555 and 63.7560> [Rule 3D .1111]
The permittee shall maintain files of all information (including all reports and notifications and all documentation supporting initial notifications and notifications of compliance status) required by Subpart DDDDD recorded in a form suitable and readily available for expeditious inspection and review. The files shall be retained for at least 5 years following the date of each occurrence, measurement, maintenance, corrective action, report, or record. At a minimum, the most recent 2 years of data shall be retained on site. The remaining 3 years of data may be retained off site. Such files may be maintained on microfilm, on a computer, on computer floppy disks, on magnetic tape disks, or on microfiche.
6. **Reporting requirements** <40 CFR 63.7550> [Rule 3D .1111]
The permittee shall submit a compliance report to this Office containing the following information:
- (a) Company and Facility name and address;
 - (b) Process unit information;
 - (c) Date of report and the beginning and ending dates of the reporting period (January 1st through December 31st);
 - (d) The total operating time during the reporting period; and
 - (e) The date of the most recent tune-up of the boiler and the date of the most recent burner inspection if it was not done annually and was delayed until the next scheduled or unscheduled boiler shutdown.

The first report is due January 31, 2017 and shall cover the period January 1, 2016 through December 31, 2016. Subsequent reports shall be postmarked or submitted no later than January 31st of each year.

In addition to submitting the compliance report to this Office, the permittee shall submit the compliance report electronically using CEDRI that is accessed through the EPA's Central Data Exchange (CDX) (www.epa.gov/cdx).

3.8 ES-62D Ash Handling System, Controlled by Cyclones 62D-PC and 62D-SC, Fabric Filter 62D-FF, and Scrubber 62D-WS; and ES-WHS Wood Handling System, Uncontrolled

The following provides a summary of the limits and/or standards for the emission source(s) described above.

Regulated Pollutant	Applicable Standard	ES-#	Applicable Regulation
Particulate Matter	0.02 lb PM/hr	ES-62D	40 CFR 51.166 and 3D .0530
Particulate Matter (fugitive)	Fugitive dust emissions from coal handling and storage are to be minimized and all trucks carrying coal or ash shall use tarps or covers to minimize fugitive dust emissions		
Particulate Matter (fugitive)	Fugitive dust emissions from the wood-fuel conveyors shall be minimized by use of covered conveyors	ES-WHS	
Visible Emissions	20 percent opacity	ES-62D, and ES-WHS	3D .0521(d) - see condition 3.1(C) for requirements

A. Prevention of Significant Deterioration [Rule 3D .0530]

1. Standard/Operation requirements [Rule 3D .0530] -

- (a) **Emission limit for ES-62D** - Total emissions of particulate matter shall not exceed 0.02 pounds per hour. This limit shall be met with the use of two cyclones, a fabric filter, and a wet scrubber as Best Available Control Technology.
- (b) **Fugitive dust emissions standard for ES-62D** - Fugitive dust emissions from coal handling and storage are to be minimized and all trucks carrying coal or ash shall use tarps or covers to minimize fugitive dust emissions as Best Available Control Technology.
- (c) **Fugitive dust emissions standard for ES-62WHS** - Fugitive dust emissions from the wood-fuel conveyors shall be minimized by use of covered conveyors as Best Available Control Technology.

2. **Testing** [Rules 3D .2602(i) and 3Q .0508(b) and (n)(2)] - The permittee shall follow the testing requirements specified in condition **3.1(C)(2)**.
3. **Monitoring requirement** [Rule 3Q .0508(f)] - The permittee shall follow the monitoring and recordkeeping requirements for visible emissions in condition **3.1(C)(3)**. In addition to monitoring visible emissions, particulate matter emissions from the ash handling system shall be controlled by the control devices during all periods of operation. To ensure that optimum control efficiency is maintained, the permittee shall perform inspections and preventative maintenance in a manner consistent with good practice for minimizing emissions. As a minimum, the inspection and maintenance requirement must include the following:
 - (a) an annual internal inspection of each of the control device's structural integrity; and
 - (b) a monthly visual inspection of the system ductwork, and material collection unit for leaks.
4. **Recordkeeping requirement** [Rule 3Q .0508(f)] - The results of all inspections and maintenance performed shall be recorded in a log (written or electronic form). The log shall be maintained on site and shall contain the following records:
 - (a) the date and time of actions recorded;
 - (b) the results of each inspection; and
 - (c) the results of any maintenance performed on the control devices.
5. **Reporting requirement** [Rule 3Q .0508(f)(1)] - The permittee shall submit a summary report of the monitoring requirements specified condition **3.8(A)(3)** to this Office by January 30th for the period July through December, and by July 30th for the period January through June.
